## GENERAL OVERVIEW

**Video Overlay** is a method by which computer-generated images are superimposed on video. Properly transformed images appear as if they are an integral part of the scene without impeding the video of the actual environment.

The primary purpose of PROTEUS is to provide the ability to insert text, logos and GPS data.

Numerous apps have been developed to enhance this product. Customers have found them to be useful like the apps available for iPhone. The existence of these apps should not discourage any customer from considering this product for basic text, logo and GPS data insertion.

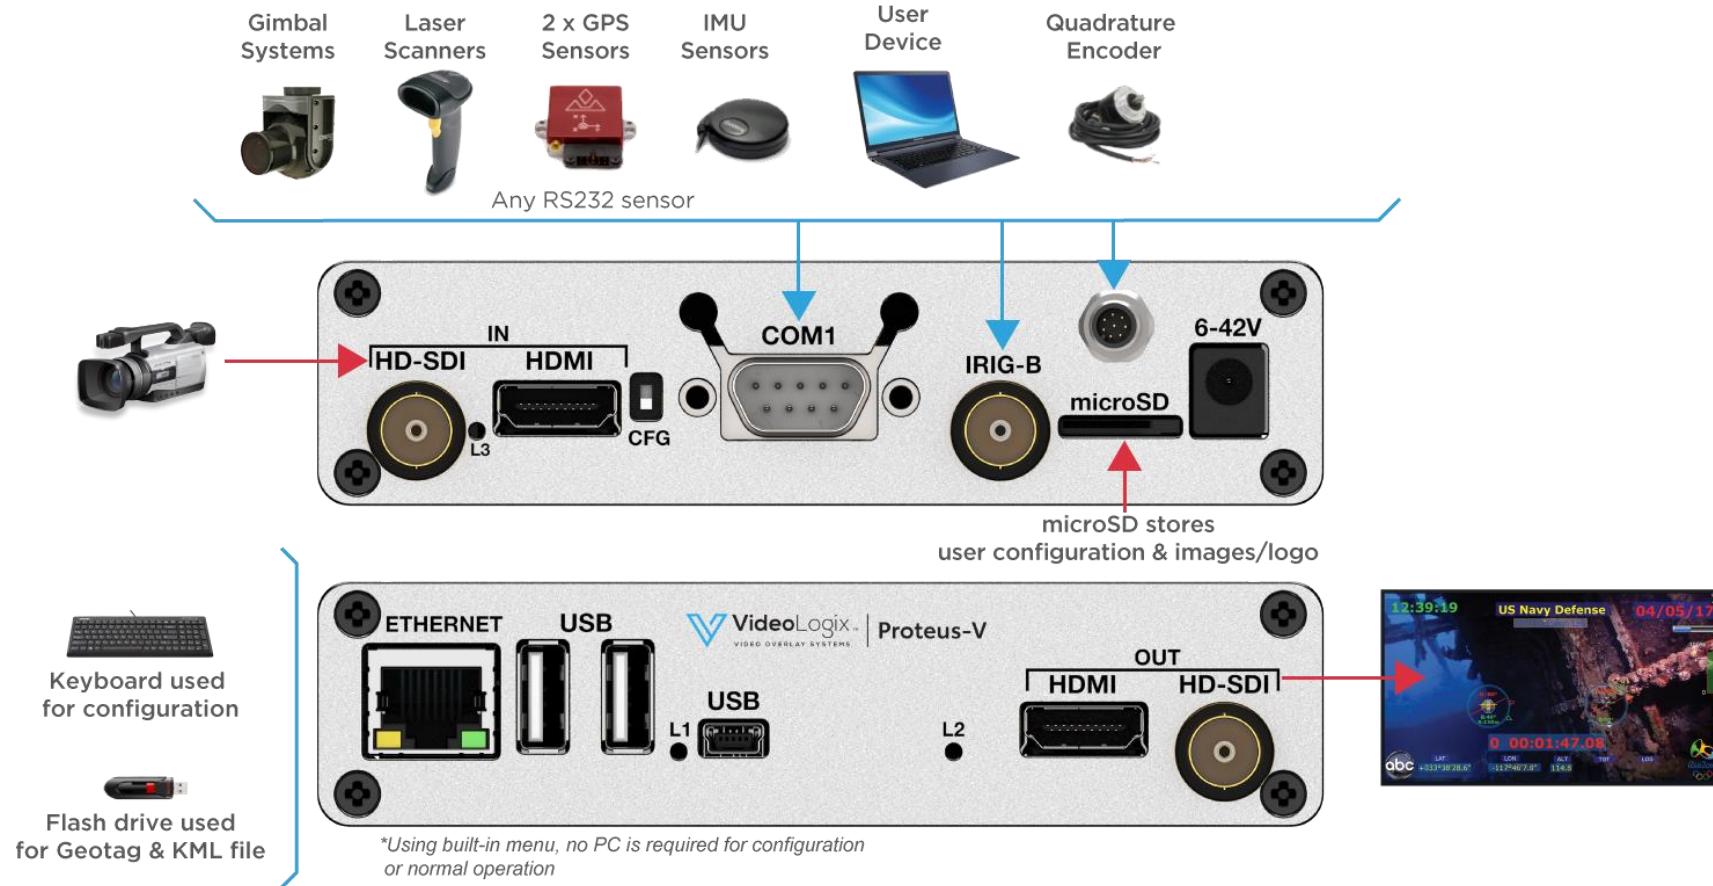

PROTEUS supports both HD-SDI, HDMI input & output. It does not need to be connected to a computer for normal operation.

PROTEUS is available in 3 editions and the table below provides a comparison. **This User Manual is for PROTEUS ESSENTIAL.**

FEATURES	PROTEUS		
	LITE	ESSENTIAL	PLUS
Insert Texts, Images, Time/Date, GPS data, POS Laser Scanner Code	✓	✓	✓
Insert values from CSV sentences via RS232 & Ethernet		✓	✓
Insert values from NMEA sensors via RS232		✓	✓
Numerous APPs + Widgets + Device drivers		✓	✓
2 x Quadrature inputs		✓	✓
4 x Analog inputs		✓	✓
Insert IRIG-B timecode		✓	✓
Insert Network SNTP timecode		✓	✓
MEMS based Compass, Gyroscope		✓	✓
30+ Drawing commands via RS232 & Ethernet		✓	✓
Superimpose composite (NTSC/PAL) video input over HD video input (PIP)		✓	✓
Geotagging + KML File			✓

## TYPICAL INTERCONNECT DIAGRAM

Diagram below illustrates a few the possible applications.

# GLOSSARY TERMS

Term	Definition
SCS	Software Communication Specification
CSV	Comma Separated Values
TB	Terminal Block
UM	User Manual
GPS	Global Position System

# COMMUNICATION

## COM PORTS

PROTEUS provides 2 x serial ports (COM1 & COM2) for communication with the external devices:

COM PORT	Location	Pin assignments
COM1	RS232: Rear Panel DB9	2=RX, 3=TX, 5=GND
COM2	RS232: Internal J54 & J16	J54: 1=RX, 2=GND, 3=TX

## COM PORTS: BAUD RATES

- COM ports are fixed for N, 8, 1. However, baud rates can be set to 4800, 9600, 19200, 38400, 57600 or 115200.

## COM PORTS: DEVICE TYPES

COM ports can be interfaced to various sensors. Table below shows the current list and their corresponding Device Type setting.

Attach Sensor/Device	Corresponding Device Type setting
Any device transmitting CSV sentences i.e. laptop, sensors	CSV1, CSV2, CSV3, CSV4 (See <a href="#">CSV formats</a> for more detail)
All NMEA-0183 compatible devices i.e. GPS Modem, Sounder, etc.	CSV1, CSV2, CSV3, CSV4
PROTEUS App	CSV1
PuTTY or similar program	CSV1
Vector NAV IMU	VectorNav
General Dynamic CINEFLEX	CINEFLEX

## COM PORTS: CONFIGURATION

Press F9 to display the Main Menu. Follow *Figure 1-Figure 2* to configure COM ports for desire baud rate & device.

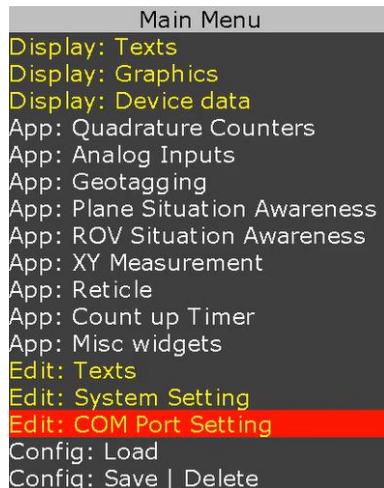

Figure 1

Edit COM Ports	
COM1 (DB9) Device	CSV1 (\$Header,Dn...*CS)
COM1 (DB9) Baud	<b>115200</b>
COM2 (INT) Device	CSV1 (\$Header,Dn...*CS)
COM2 (INT) Baud	4800
Sentence A Header	\$SentenceA
Sentence B Header	\$SentenceB
Sentence C Header	\$SentenceC
Sentence D Header	\$SentenceD
COM2 mode	RS232
\$PTSAG ID	0
Proteus IP Address type	STATIC
SNTP	DISABLE
SNTP Server IP Address	192.168.1.120
Proteus IP Address	192.168.1.131

Figure 2

## COM1

COM1 (DB9) is configured as DTE (PC) i.e. RX=Pin2, TX=Pin3. Thus, sensors such as GPS can be directly connected to the DB9 without the need for NULL modem cable. However, a NULL modem cable is required to interface PROTEUS to a PC.

This port can be used to send remote commands defined in SCS (Software Communication Specification) or connect any RS232 sensor.

## COM2

COM2 is located internal. Signals TX & RX are provided at J16 connector (Compatible with Garmin GPS 18x LVC) as well as Terminal Block J54.

This port can be used to send remote commands defined in SCS (Software Communication Specification) or connect any RS232 sensor.

## USB DEVICE PORT

This port is used to upgrade the internal firmware. When connected to a PC, it will enumerate as a COM port. This port can also be used to send remote commands defined in SCS (Software Communication Specification).

## USB HOST PORTS

PROTEUS has 2 USB host ports. Typical devices connected to these ports are USB keyboard and USB Flash drive.

## CSV FORMATS

A CSV (Comma Separated Values) is an ASCII sentence composed of a unique header, followed by up to 12 comma separated values and a checksum.

**\$Header,VAL1,VAL2,VAL3,VAL4,VAL5,VAL6,VAL7,VAL8,VAL9,VAL10,VAL11,VAL12\*CS**

<b>\$</b>	Signifies start of the sentence.
<b>Header</b>	Sentence header. Follow <i>Figure 1-2</i> to define your unique sentence header.
<b>VALn</b>	Each sentence contains multiple values (VALn) delimited by commas.
*	The asterisk serves as checksum delimiter.
<b>CS</b>	The checksum field contains two ASCII characters which indicate the hexadecimal value of the checksum.

PROTEUS supports 4 different CSV sentences:

Type	Sentence includes	Sentence Structure	Example
CSV1	\$Header, Values..., Checksum	\$HEADER,VAL1,VAL2,VAL3,...VALn*CS	\$STEVE,45,315,200,100*XX
CSV2	\$Header, Values...	\$HEADER,VAL2,VAL3,...	\$BRIAN,45,315,200,100
CSV3	\$Values...	\$VAL1,VAL2,VAL3,...	\$45,315,200,100
CSV4	Values ...	VAL1,VAL2,VAL3,..	45,315,200,100

Upon reception of a **CSV** sentence and confirmation of the sentence header (only CSV1), PROTEUS parses the sentence. Parsed values (VAL1 ... VAL12) are sequentially stored in [Registers](#) # 40 through 87. Any widgets linked to these registers will automatically get updated. CSV sentence vary in length, but each VALn is limited to 40 characters or less.

For more detail on how to use CSV sentences, see [Display values from any csv sentence](#)

The checksum field is the last field in a sentence and follows the checksum delimiter character “\*”. The checksum is the 8-bit exclusive OR of all characters in the sentence, including “,” delimiters, between but not including the “\$” and the “\*” delimiters. The hexadecimal values of the most significant and least significant 4 bits of the result is converted to two ASCII characters (0-9, A-F (upper case)) for transmission. The most significant character is transmitted first. Example: \$GPGLL,5057.970,N,00146.110,E,142451,A\*27<CR><LF>

In C checksum computation would be written as:

```
char sentence [] = "GPGLL,5057.970,N,00146.110,E,142451,A";
int i;
char checksum = 0;
for ( i = 0; i < strlen(sentence); i++)
    checksum ^= sentence[i];
```

Although not recommended, for CSV1 type sentences, checksum computation can be bypassed by replacing **CS** with **XX**.

## ETHERNET PORT

This port can be used to send remote commands defined in SCS (Software Communication Specification).

- 10M/100M auto sensing network interface
- Networking: Static or DHCP IPv4 addressing
- Subnet Mask: 255.255.255.0
- Default Gateway: 0.0.0.0
- UDP protocol. Port 9999

Follow [Figure 1-Figure 2](#) to configure network interface. Following any change to the DHCP setting, power must be recycled for the change to take effect. *PROTEUS's IP address can be viewed by pressing Alt-h.*

F9	Main Menu
Alt+H	Help
Alt+G	Display Grid
F1	Start External Video Recorder
F2	Stop External Video Recorder
F3	KML: Drop Placemaker #1
F4	KML: Drop Placemaker #2
F8	Edit User Texts
Esc	Clear screen
Serial	1900000D17174B018E53A6CDAE75B20C
Edition	Pro
Ver	V2.10-E
Video	HDMI=VIC0, SDI=0A, Output=VIC5
IP	DHCP: 192.168.1.131

## VIDEO INPUT & OUTPUT

PROTEUS provides the following video input & output:

- SDI (HD & SD)
- HDMI (HD & SD)

PROTEUS does *not support* HDMI video with *HDCP*. It can only process one video input at a given time. If more than one input is connected at the same time, PROTEUS selects a video input based on the following priorities:

1. HD-SDI
2. HDMI

PROTEUS does not scale video and the output resolution follows the input. PROTEUS provides simultaneous video outputs.

## **VIDEO FRAME RATES**

PROTEUS is compatible with the following video formats:

1080i @ 50 / 60 Hz  
1080p @ 23.98 / 24 / 25 / 29.97 / 30 Hz  
1080PsF @ 23.98 / 24 Hz  
720p @ 50 / 59.94 / 60 Hz  
NTSC 480i @ 60 Hz  
PAL 576i @ 50 Hz

## **VIDEO DELAY**

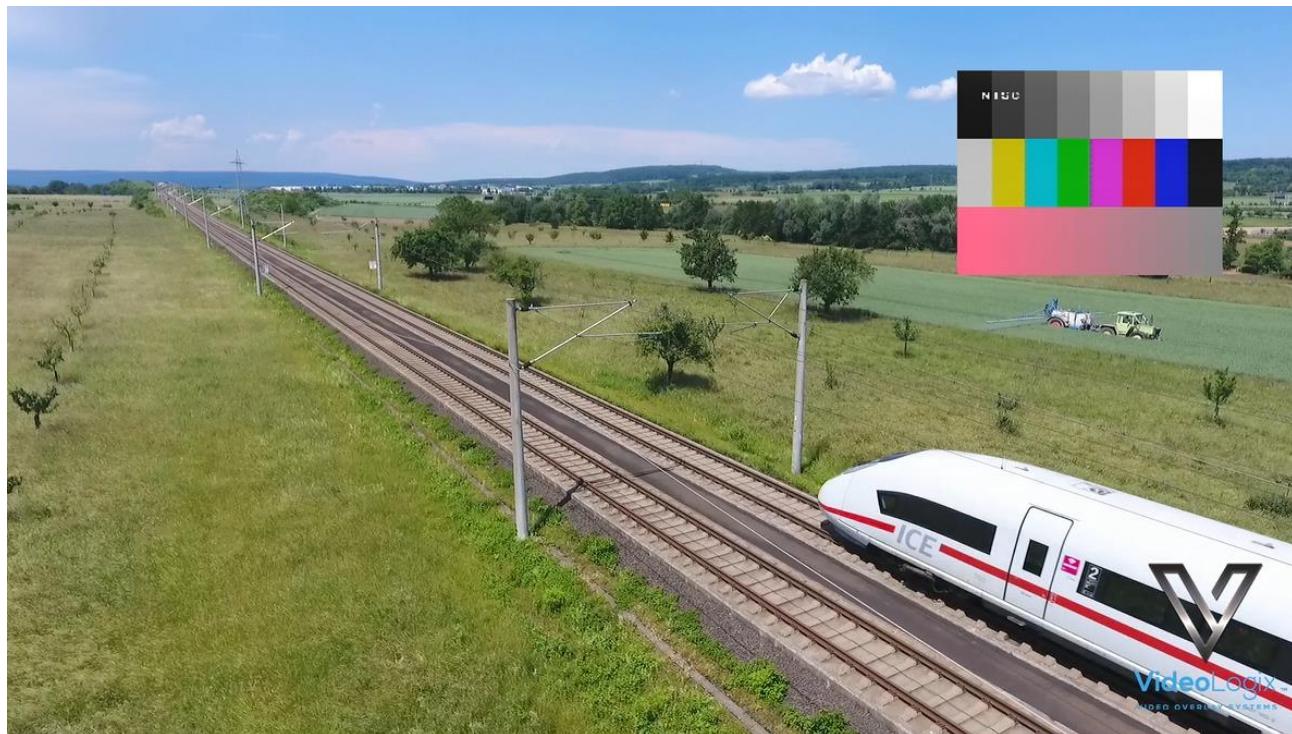

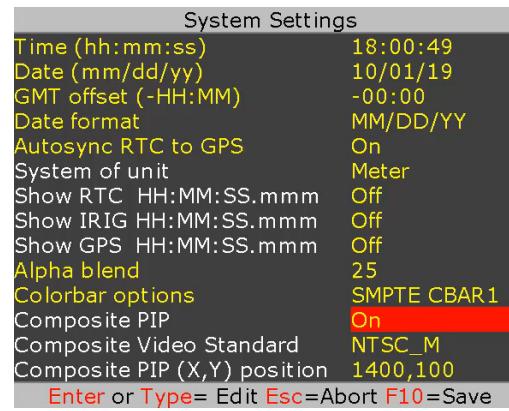

All OSD functions are superimposed into the video "on-the-fly." As a result, there is no degradation in video quality and the delay from the video input to the video output is < 290 nsec.

## **IRIG INPUT**

This interface can be used to input an external unmodulated IRIG-B signal. PROTEUS can decode IRIG-B time & date code. This interface can also be used to input a composite video NTSC (M, J, 4.43) or PAL (B,D,G,H,I,M,N,CN) for purpose of superimposing it on a HD video as PIP.

## COMPOSITE INPUT (PIP)

IRIG input can also be used to input a composite video NTSC (M, J, 4.43) or PAL (B,D,G,H,I,M,N,CN) for purpose of superimposing it on a HD video. To enable PIP follow the pictures below. Composite video (as shown below as colorbar) can be superimposed anywhere on the 1920 x 1080.

# LOAD CONFIGURATION

PROTEUS can maintain 16 different configurations. Follow figures below to load a configuration.

# STORE CONFIGURATION

PROTEUS stores 16 different configurations. Follow figures below to save your configuration.

To save, type in the new file name in an empty field or highlight a file name (overwrite) and press **F10** to save.

To delete, highlight the file name and press **Ctrl + Alt + F10**.

# TEXT, LOGO AND DATA INSERTER

## QUICK TUTORIAL

### DISPLAY TIME, DATE

1. Press F9 to display main menu
2. Follow *Figure 3 - Figure 5* to insert the desired parameter
3. On *Figure 5*, use  $\uparrow\downarrow$  arrow keys to select "RTC Time"
4. Press  $\downarrow$  to select "On"
5. RTC time will appear on the screen and *flashing*.
6. Use shortcuts keys to change the field attributes as described below:  
"Font select, field **Width**, text **Justification**, text **Color**, text **Background** and **Ctrl** or **Alt +  $\uparrow\downarrow$**  text position"
7. Repeat steps 3 through 6 to display "RTC Date"
8. Press F10 to save and exit.

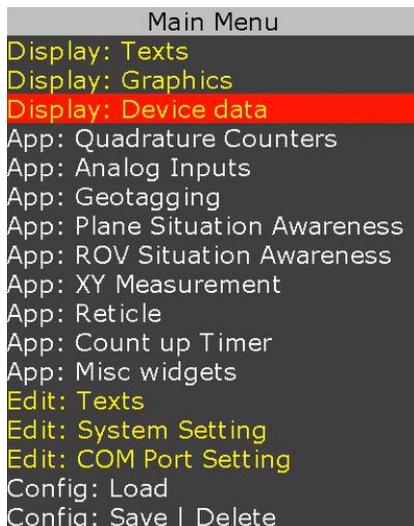

Figure 3

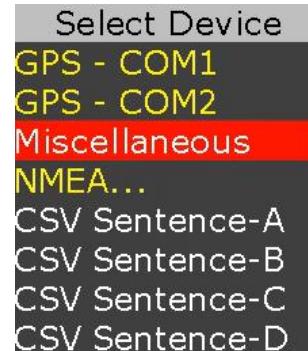

Figure 4

Miscellaneous Parameters	
When to display	Always On
RTC Time	Off
RTC Date	Off
IRIG Time	Off
IRIG Date	Off
Barcode scanner result	Off
Digital Inputs	Off
NTP Time & Date Buffer	Off
NTP Unix Epoch	Off

Enter=Select Ctrl or Alt + Arrow=Move  
Font Width Justify Color Backcolor  
Esc=Abort F10=Save

Figure 5

## DISPLAY TEXT

Press F9 to display Main Menu. Follow *Figure 6 - Figure 7* to type-in or edit pre-existing texts.

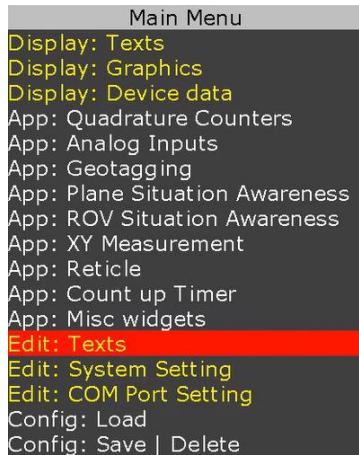

Figure 6

Figure 7

Follow *Figure 8 - Figure 9* to display text on video.

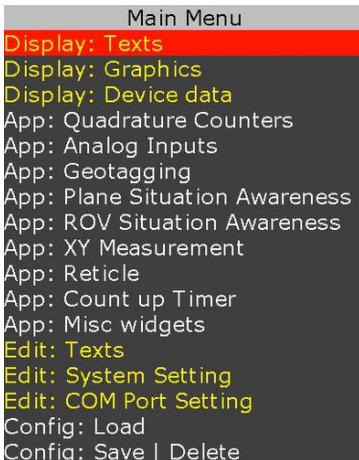

Figure 8

Figure 9

While in *Figure 9*, use  $\uparrow$  arrow keys to select desire text. Press  $\downarrow$  to select "On". Use shortcuts keys to format the text as described below:

Font select, field **Width**, text **Justification**, text **Color**, text **Background** and **Ctrl or Alt +  $\uparrow\downarrow$**  text position

Insert text

This is font#1

This is font#2

This is font#3

This is font#4

This is font#5

This is font#6

This is font#7

This is font#8

## DISPLAY IMAGES

Please review [Appendix D – images](#) on how to prepare images for use with PROTEUS.

Press F9 to display Main Menu. Follow [Figure 10](#)- [Figure 11](#) to display images.

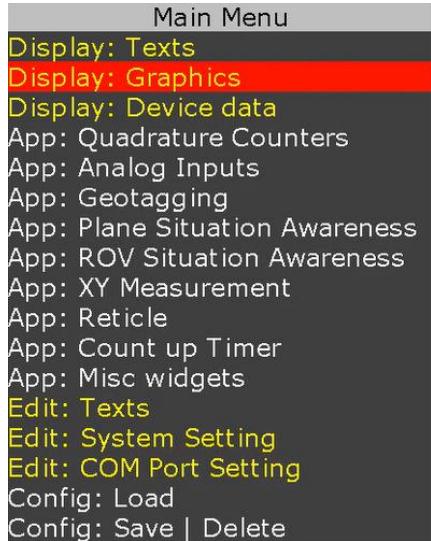

Figure 10

Figure 11

While in [Figure 11](#), use  $\uparrow$  to select a desire image. Press  $\downarrow$  to select “On”. Use  $\text{Ctrl}$  or  $\text{Alt} + \leftrightarrow$  to position the image on screen.

## DISPLAY GPS DATA

- Two independent GPS modems can be connected to COM1 & COM2 at the same time.
- COM ports are fixed for N, 8, 1. Follow *Figure 1 - Figure 2* to configure for desire baud rate
- \$GPRMC, \$GPGGA, \$PTSAG, \$GPWPL, \$GPGSA, \$GPGSV, \$GPGGL....

A *sample* GPS file is provided with your PROTEUS. To load it, press F9, go to "*Config: Load*" and select "*GPS*".

- |          |                  |                                             |
|----------|------------------|---------------------------------------------|
| <b>1</b> | GPS data         | Obtained directly from GPS modem            |
| <b>2</b> | Circular Compass | Controlled via GPS heading                  |
| <b>3</b> | Rolling Compass  | Controlled via GPS heading                  |
| <b>4</b> | Misc. Parameters | Title, Logo. Fully configurable by the user |

To customize the sample file to meet your needs, follow [Figure 12 - Figure 14](#).

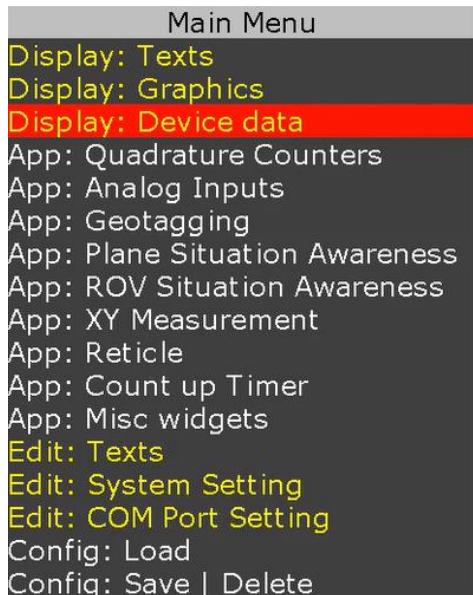

Figure 12

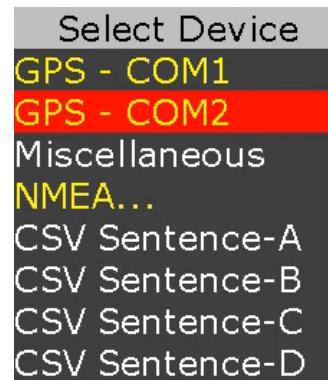

Figure 13

COM2 GPS Parameters	
When to display	Always On
Latitude (ddd.dddddd°)	Off
Latitude (ddd°mm.mmmm')	Off
Latitude (dd°mm'ss")	On
Longitude(dd.dddddd°)	Off
Longitude(dd°mm.mmmm')	Off
Longitude(dd°mm'ss")	On
Altitude	On
Time	On
Date	On
Heading (0..360°)	On
Speed	On
Sequence	Off
ID	Off

Enter=Select Ctrl or Alt + Arrow=Move  
Font Width Justify Color Backcolor  
Esc=Abort F10=Save

Figure 14

While in [Figure 14](#), use ↑ to select desire GPS parameter. Press ↓ to select “On”. Use [shortcuts](#) keys to format the text as described below:

Font select, field Width, text Justification, text Color, text Background and Ctrl or Alt + ↑↔ text position

## DISPLAY NMEA DATA

- PROTEUS intrinsically supports many NMEA sentences such as \$GPRMC, \$GPGGA, \$PTSGA, \$GPWPL, \$GPGSA, \$GPGSV, \$GPGGL, \$SDDPT, \$SDDBT, \$WIMTW, \$WIMWV, \$VNINS, \$VNIMU, \$VNYPYR, \$PTNTHPR, \$HCHDG, \$HCHDT, \$HCC, \$DBS, \$PCIT, \$PCIPR, etc.
- For above messages, just configure [COM port](#) and PROTEUS is ready to receive messages & manage your visual data. Follow [Figure 15-Figure 17](#) and [Figure 12 - Figure 14](#) to display NMEA parameters.
- You may come across a NMEA sentence that is not intrinsically supported by PROTEUS for example \$PTCF. To configure PROTEUS to receive this sentence, follow [Figure 1 - Figure 2](#) and replace \$SentenceA with \$PTCF. Upon reception of \$PTCF sentence, PROTEUS parses the sentence and parsed values (VAL1..VAL6) are sequentially stored in Registers # 40-45 as shown below:

\$PTCF,HHH.H,T,+RRR.R,+PPP.P,+rrr.rr,+ppp.pp\*CS

\$PTCF	VAL1	VAL2	VAL3	VAL4	VAL5	VAL6
Register	40	41	42	43	44	45
Values	HHH.H	T	+RRR.R	+PPP.PP	+rrr.rr	+ppp.pp

For more detail on how to display each value, please see [Display values from any csv sentence](#)

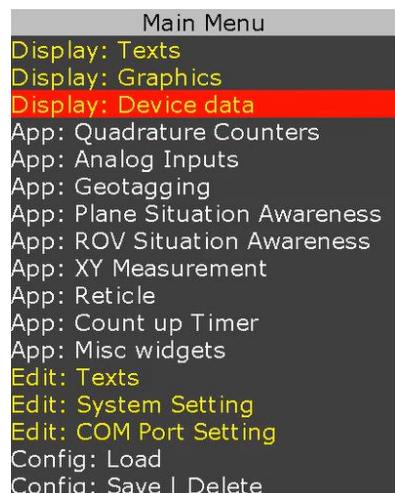

Figure 15

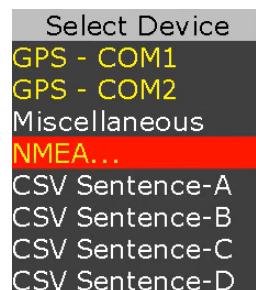

Figure 16

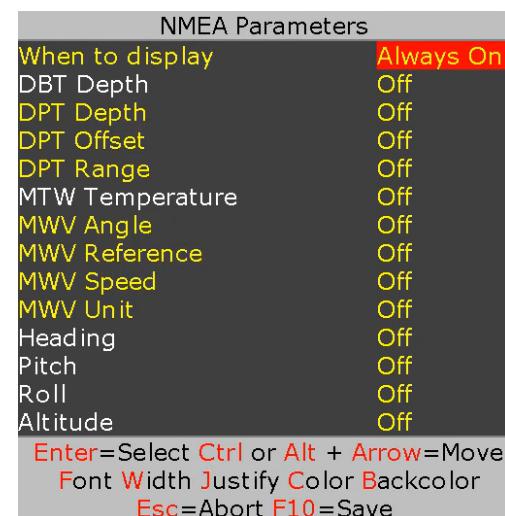

Figure 17

## DISPLAY VALUES FROM ANY CSV SENTENCE

## DISPLAY VALUES FROM ANY UNSUPPORTED NMEA SENTENCE

A CSV (Comma Separated Values) is an ASCII sentence composed of a unique header, followed by up to 12 comma separated values and a checksum.

**\$Header,VAL1,VAL2,VAL3,VAL4,VAL5,VAL6,VAL7,VAL8,VAL9,VAL10,VAL11,VAL12\*XX**

- All NMEA-0183 messages are CSV
- PROTEUS intrinsically supports many of the NMEA-0183 messages i.e. \$GPRMC, \$GPGGA, \$PTSGA, \$GPWPL, \$GPGSA, \$GPGSV, \$GPGGL, \$SDDPT, \$SDBT, \$WIMTW, \$WIMWV, \$VNINS, \$VNIMU, \$VNYPR, \$PTNTHPR, \$HCHDG, \$HCHDT, \$HCC, \$DBS, \$PCIT, \$PCIPR, etc.
- For these messages, just configure [COM port](#) and PROTEUS is ready to receive messages & manage your visual data
- There may be instances where you want to send your own CSV message or support a new NMEA message
- You can configure PROTEUS to receive up to 4 customize CSV messages (A, B, C, D)
- Upon reception of CSV sentence, PROTEUS verifies checksum & parses the message
- For each message, parsed values (VAL1.. VAL12) are stored in Registers # 40-87 as shown below:

<b>\$Header-A</b>	<b>VAL1</b>	<b>VAL2</b>	<b>VAL3</b>	<b>VAL4</b>	<b>VAL5</b>	<b>VAL6</b>	<b>VAL7</b>	<b>VAL8</b>	<b>VAL9</b>	<b>VAL10</b>	<b>VAL11</b>	<b>VAL12</b>
Register	40	41	42	43	44	45	46	47	48	49	50	51

<b>\$Header-B</b>	<b>VAL1</b>	<b>VAL2</b>	<b>VAL3</b>	<b>VAL4</b>	<b>VAL5</b>	<b>VAL6</b>	<b>VAL7</b>	<b>VAL8</b>	<b>VAL9</b>	<b>VAL10</b>	<b>VAL11</b>	<b>VAL12</b>
Register	52	53	54	55	56	57	58	59	60	61	62	63

<b>\$Header-C</b>	<b>VAL1</b>	<b>VAL2</b>	<b>VAL3</b>	<b>VAL4</b>	<b>VAL5</b>	<b>VAL6</b>	<b>VAL7</b>	<b>VAL8</b>	<b>VAL9</b>	<b>VAL10</b>	<b>VAL11</b>	<b>VAL12</b>
Register	64	65	66	67	68	69	70	71	72	73	74	75

<b>\$Header-D</b>	<b>VAL1</b>	<b>VAL2</b>	<b>VAL3</b>	<b>VAL4</b>	<b>VAL5</b>	<b>VAL6</b>	<b>VAL7</b>	<b>VAL8</b>	<b>VAL9</b>	<b>VAL10</b>	<b>VAL11</b>	<b>VAL12</b>
Register	76	77	78	79	80	81	82	83	84	85	86	87

## EXAMPLE

\$Header-A,1,22,333,4444,55555,666666,7777777,88888888\*XX

<b>\$Header-A</b>	<b>VAL1</b>	<b>VAL2</b>	<b>VAL3</b>	<b>VAL4</b>	<b>VAL5</b>	<b>VAL6</b>	<b>VAL7</b>	<b>VAL8</b>
Register	40	41	42	43	44	45	46	47
Values	1	22	333	4444	55555	666666	7777777	88888888

\$Header-C,This,is,an,,,Example\*XX

<b>\$Header-C</b>	<b>VAL1</b>	<b>VAL2</b>	<b>VAL3</b>	<b>VAL4</b>	<b>VAL5</b>	<b>VAL6</b>
Register	64	65	66			67
Values	This	is	an			Example

A *sample* CSV file is provided with your PROTEUS. To load it, press F9, go to “*Config: Load*” and select “*CSV*”.

- |   |                   |                                                              |
|---|-------------------|--------------------------------------------------------------|
| 1 | Sentence-A values | VAL1..VAL8                                                   |
| 2 | Sentence-B values | VAL1..VAL4                                                   |
| 3 | Sentence-C values | VAL1..VAL4                                                   |
| 4 | Sentence-D values | VAL1..VAL4                                                   |
| 5 | Misc. Parameters  | Texts, RTC Time & Date, Logo. Fully configurable by the user |

Upon transmission of the following sentences (use PuTTY @115K, N,8,1), their values should appear as shown in *Figure 18*.

```
$SentenceA,1,22,333,4444,55555,666666,7777777,88888888*XX  
$SentenceB,A,BB,CCC,DDDD*XX  
$SentenceC,Pitch,Roll,Yaw,Heading*XX  
$SentenceD,This,is,an,Example*XX
```

Figure 18

Any individual value can also be updated by sending command **\$VL43**. For example:

- To change VAL7 from SentenceA to 777 send: **\$VL43,46,777\*XX**.
- To change VAL6, VAL7, VAL8 from SentenceA to 777,8888,99999 accordingly, send: **\$VL43,45,777,8888,99999\*XX**.

To customize the sample file to meet your needs, follow [Figure 19-Figure 24](#).

## REAL TIME ANNOTATION

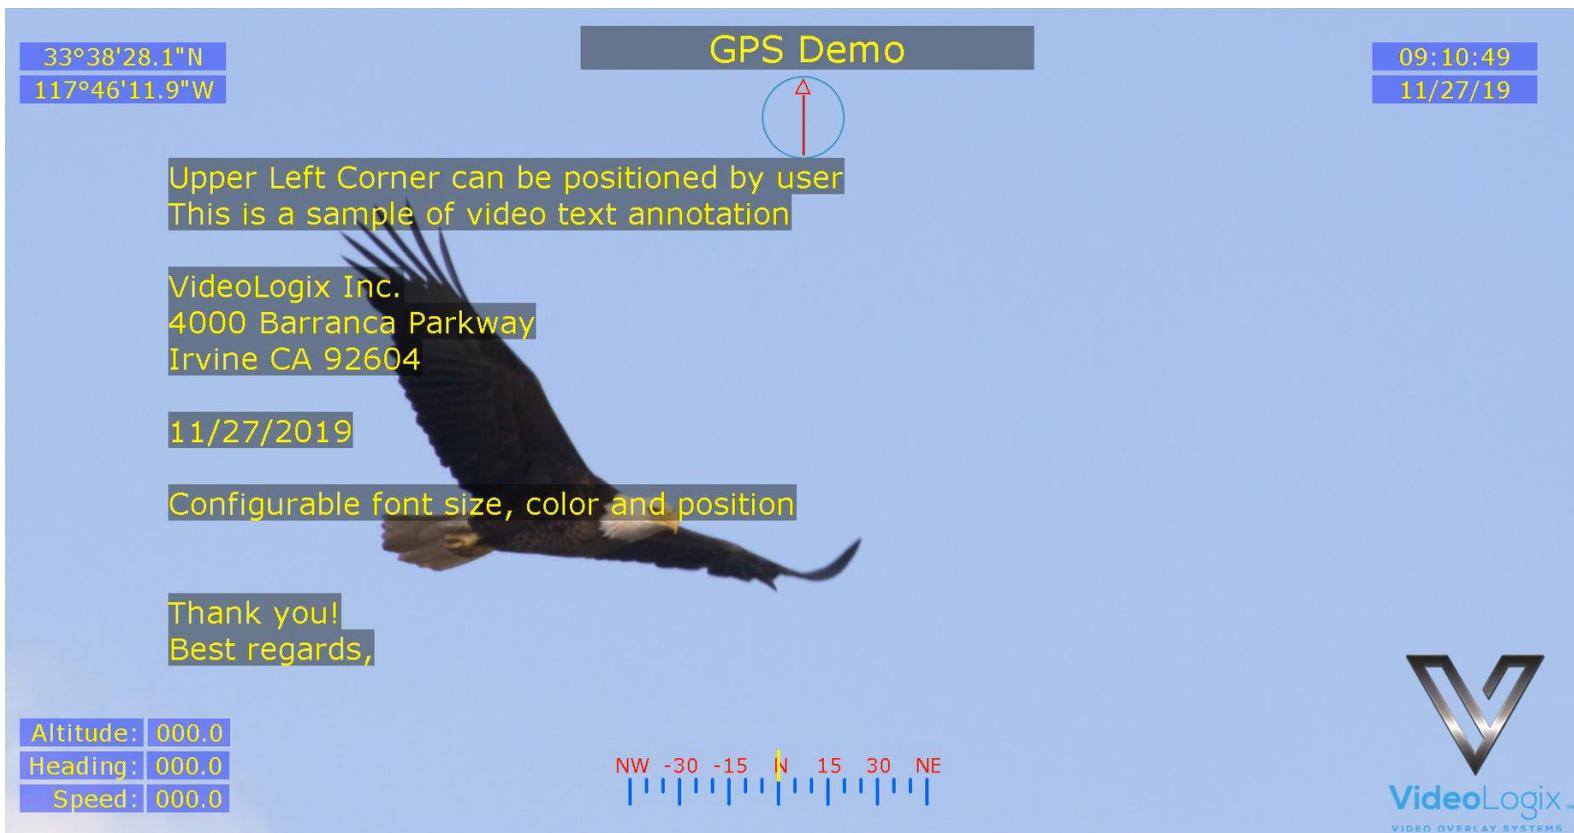

Follow [Figure 26](#) and [Figure 27](#) to enable “Real time annotation”.

The default settings for annotation is:

- Upper left corner (x, y) is 100, 100
- Font size #2
- Text color yellow
- Text background color blue

To change the default setting, visit [Display text](#) and follow [Figure 6](#) through [Figure 9](#) to display, position and format **Text #10**. Once complete, remove Text #10 as shown in [Figure 9](#).

Once annotation is enabled, your keyboard entries will appear as shown in the picture below. Press Esc to clear the text.

## APPEND MILLISECOND COUNTER TO IRIG, GPS, RTC TIME

Follow *Figure 26* - *Figure 27* to append millisecond count to RTC, IRIG and GPS time. Millisecond counter is reset on second rollover. Once enable, the displayed time will refresh at video frame rate i.e. 30 time per second for 1080p@30

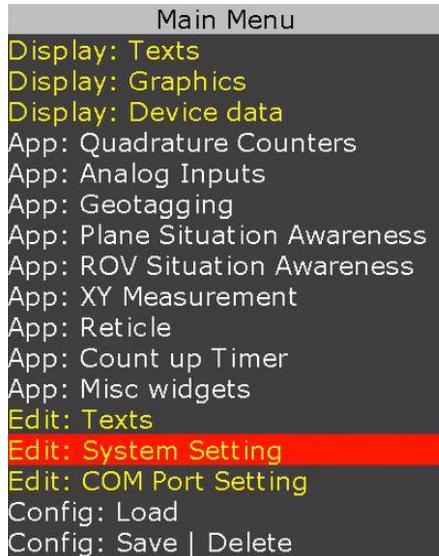

Figure 26

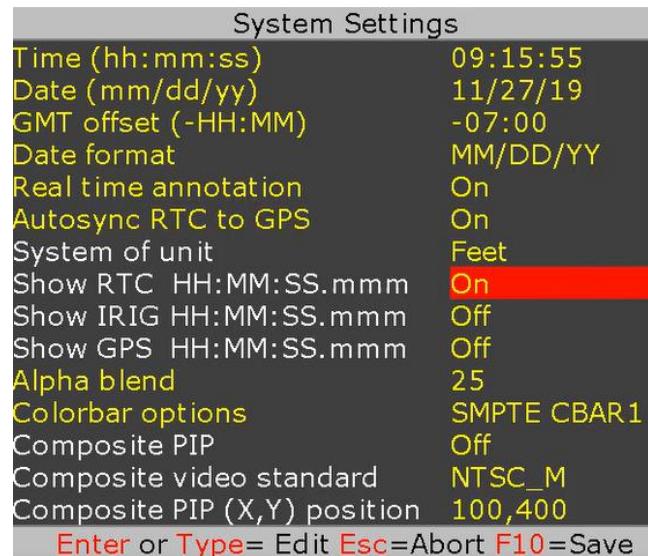

Figure 27

## SNTP

**SNTP** (Simple Network Time Protocol) synchronizes PROTEUS built-in RTC with a server that has already been synchronized by a source such as a radio, satellite receiver or modem.

PROTEUS SNTP Client operates in unicast to obtain time over the network. It polls its SNTP Server on regular interval and waits to receive a reply from that Server. When one is received, it verifies that the reply contains a valid update by applying a set of 'sanity check' recommended by RFC 4330. It then applies Server clock directly to its local clock (RTC).

Follow [Figure 28 - Figure 29](#) to configure SNTP.

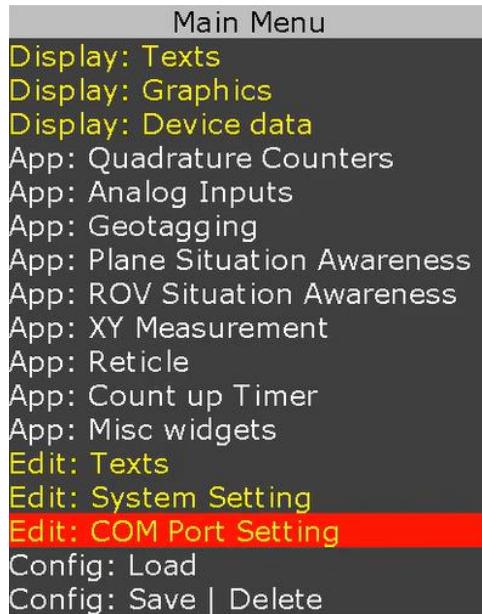

Figure 28

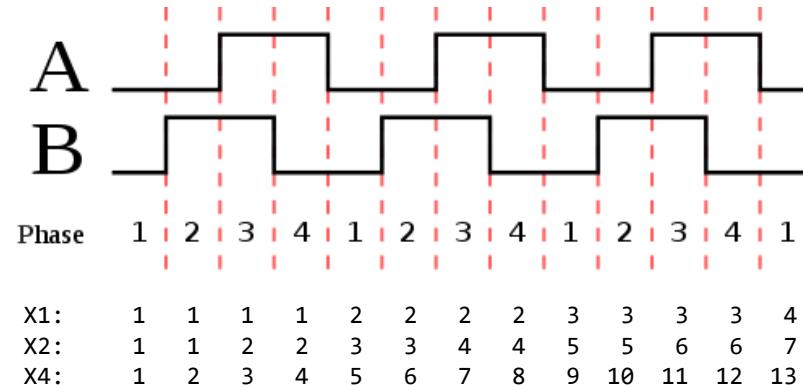

Edit COM Ports

Figure 29

# APPS

## QUADRATURE OR SIMPLE COUNTERS

- Two Quadrature counters.
- Counters are 26-bits wide. Maximum count 67,108,863 or  $\pm 33,554,431$
- Configurable line resolution  $x_1, x_2, x_4$ . See diagram below for additional detail
- Dedicated RESET pins
- Raw counter value can be converted to any unit (distance, speed, etc.) using  $mapped\_count = m * raw\_count + b$
- Counter values can be used to control “XY Measurement app” or “Reticle app”
- Interface compatible with Mechanical, Hall effect & Optical rotary encoders

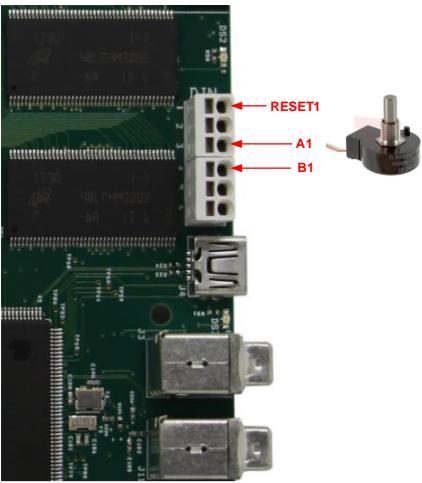

The counters can be configured as Quadrature or Simple counters.

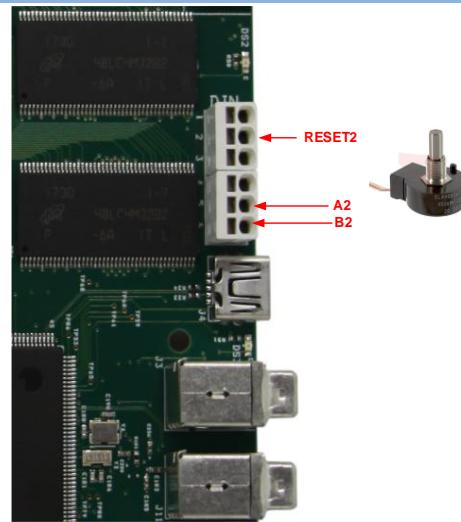

Terminal Block (J52-J53) Pins	As Quadrature Counters	As Simple Counters
<b>DIN1</b>	RESET for Counter 1.	RESET for Counter 1
<b>DIN2</b>	RESET for Counter 2	RESET for Counter 2
<b>DIN3</b>	Quadrature Counter 1 inputs	Simple Counter 1 input
<b>DIN4</b>		-
<b>DIN5</b>	Quadrature Counter 2 inputs	Simple Counter 2 input
<b>DIN6</b>		-

## Typical wiring connection for Quadrature Counters

**Quadrature Counter 1**

**Quadrature Counter 2**

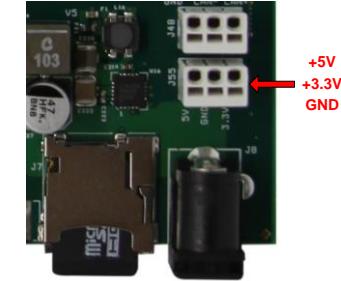

**Electrical Interface**

Input compatibility:

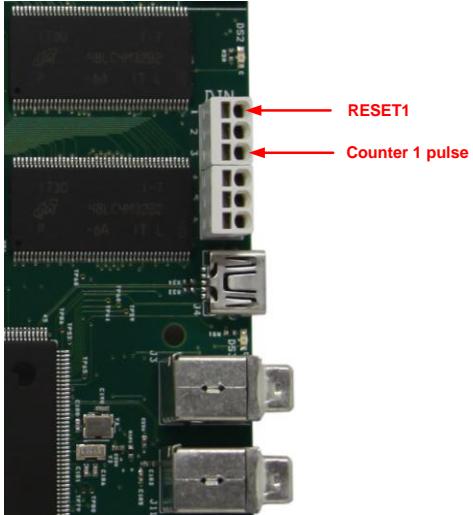

- 0-5V logic (10mA sink current)
- Frequency < 10MHz

Power & ground can be provided to the quadrature encoder via J55:

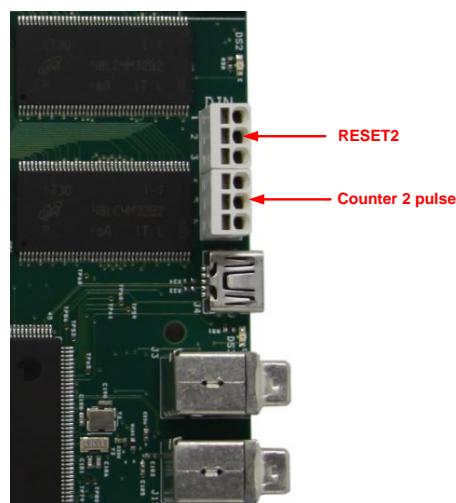

## Typical wiring connection for Simple Counters

**Simple Counter 1**

**Simple Counter 2**

**Electrical Interface**

Input compatibility:

- 0-5V logic (10mA sink current)
- Frequency < 1KHz (5msec debouce)

## CONFIGURE COUNTERS

A *sample* Quadrature file is provided with your PROTEUS. To load it, press F9, go to “*Config: Load*” and select “*Quadrature*”.

- 1** Raw count
- 2** Mapped count
- 3** Misc. Parameters

*raw\_count = 67,108,863 or  $\pm 33,554,431$*   
*mapped\_count = m \* raw\_count + b*  
Title, Time & Date, Logo. Fully configurable by the user

To customize the sample file to meet your needs, follow [Figure 30 - Figure 32](#)

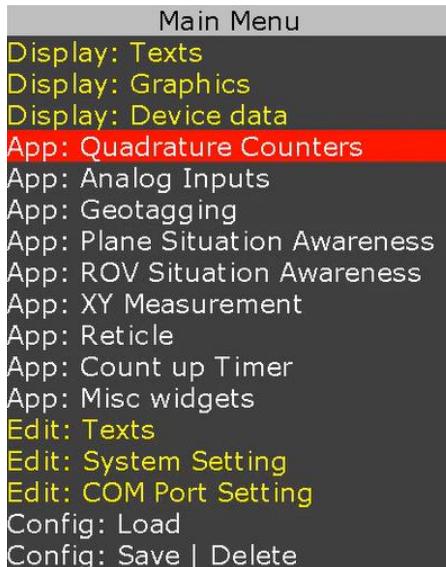

Figure 30

Figure 31

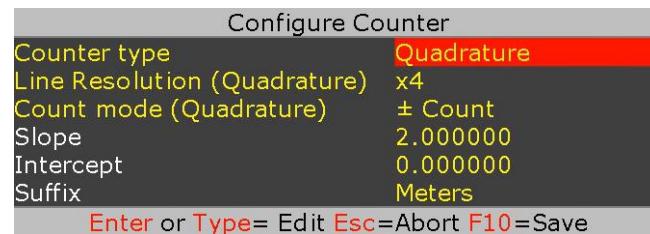

Figure 32

Figure 33

Figure 34

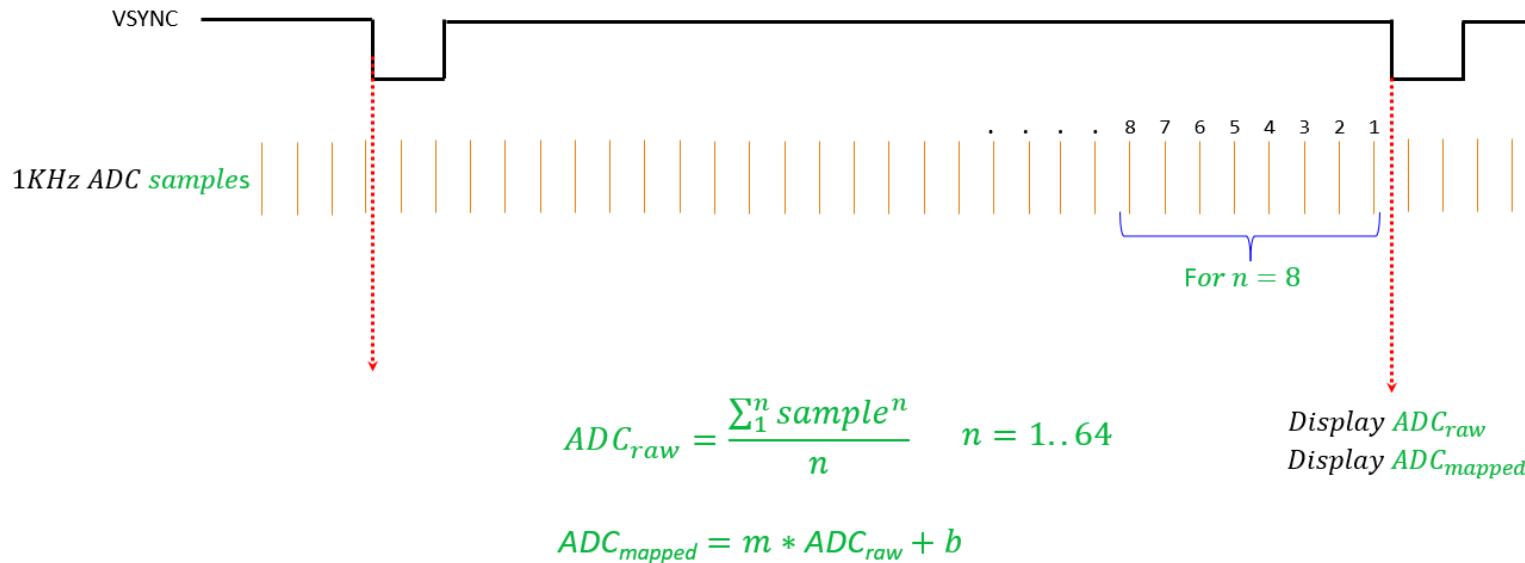

## EXAMPLE

Configure counter 1 for 0.0023 inch/count and display result.

- Follow [Figure 30 - Figure 32](#) to set Counter 1 “*Slope*” and “*Intercept*” to 0.0023 and 0 respectively.
- Follow [Figure 30, Figure 33 - Figure 34](#) to display “*Counter 1 Map*”

## ANALOG DATA

- Four Analog inputs
- Input range 0..3.3V
- Internal low pass RC filter ( $24\Omega$ ,  $5600\text{pF}$ )
- 12-Bit ADC. Analog signals are *Sampled* at 1KHz. Each ADC *Sample* is average of 4 consecutive ( $2\mu\text{s}$  apart) samples
- $ADC_{raw}$  is average of 1 to 64 (user selectable) most recent *Samples*.
- For example  $n=1$  displays the most recent sample and  $n=8$  displays average of the most recent 8 samples
- Analog signals can be converted to any unit using  $ADC_{mapped} = m * ADC_{raw} + b$
- $ADC_{mapped}$  and  $ADC_{raw}$  are placed in video frame on falling edge of VSYNC. See diagram below for additional detail
- Analog signals can also be used to control “XY Measurement app” or “Reticle app”

TB: J50	Description	Range	Corresponding 12-bit ADC Value
Pin 1	GND	-	-
Pin 2	Analog Input CH1	0..3.3V	0..4095
Pin 3	Analog Input CH2	0..3.3V	0..4095
Pin 4	Analog Input CH3	0..3.3V	0..4095
Pin 5	Analog Input CH4	0..3.3V	0..4095
Pin 6	GND	-	-

A *sample* Analog file is provided with your PROTEUS. To load it, press F9, go to “*Config: Load*” and select “*Analog*”.

**1** Raw Analog values

$$ADC_{raw} = 0.4095$$

**2** Mapped Analog values

$$ADC_{mapped} = m * ADC_{raw} + b$$

**3** Misc. Parameters

Title, Time & Date, Logo. Fully configurable by the user

To customize the sample file to meet your needs, follow [Figure 35 - Figure 37](#):

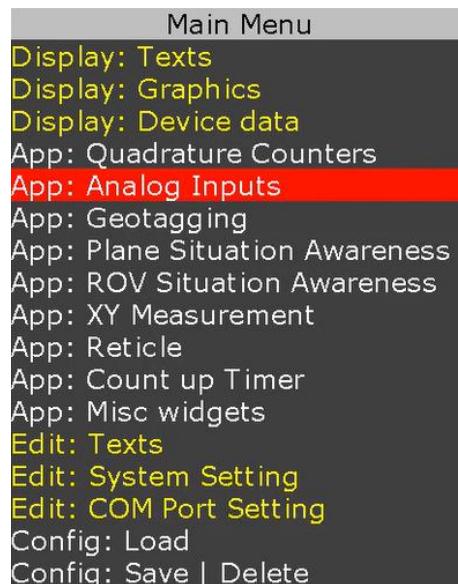

Figure 35

Figure 36

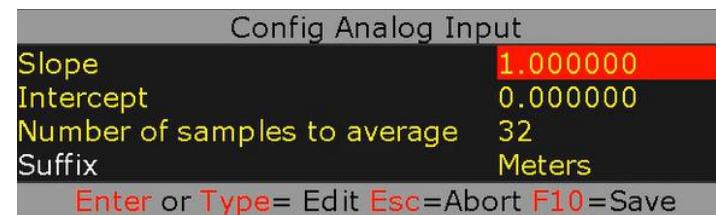

Figure 37

Figure 38

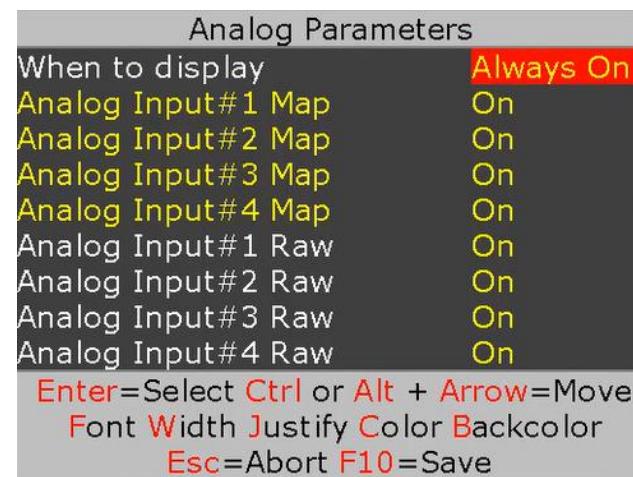

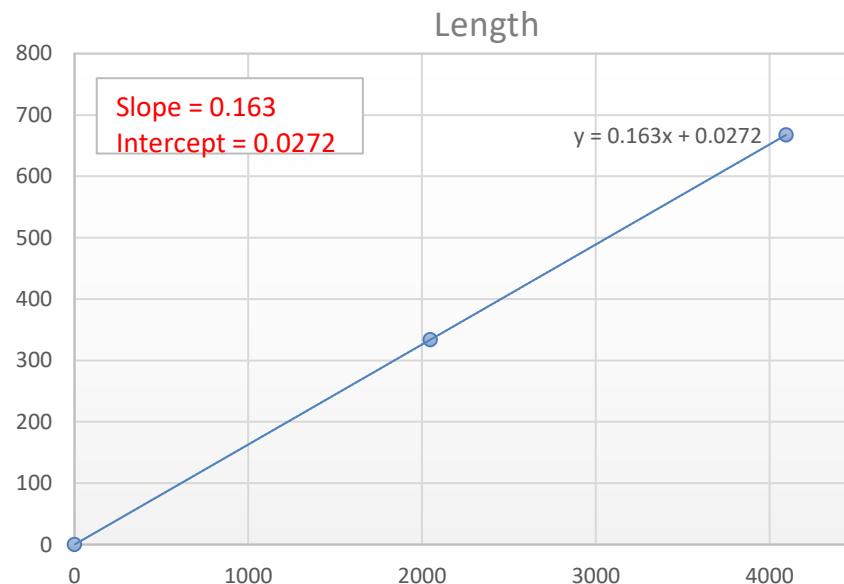

Figure 39

## EXAMPLE 1

Configure analog channel 1 to convert 0-3.3V input to display 0 - 667.5 feet.

Input	ADC Count	Represent (feet)
3.3V		
0	0	0
3.3	4095	667.5

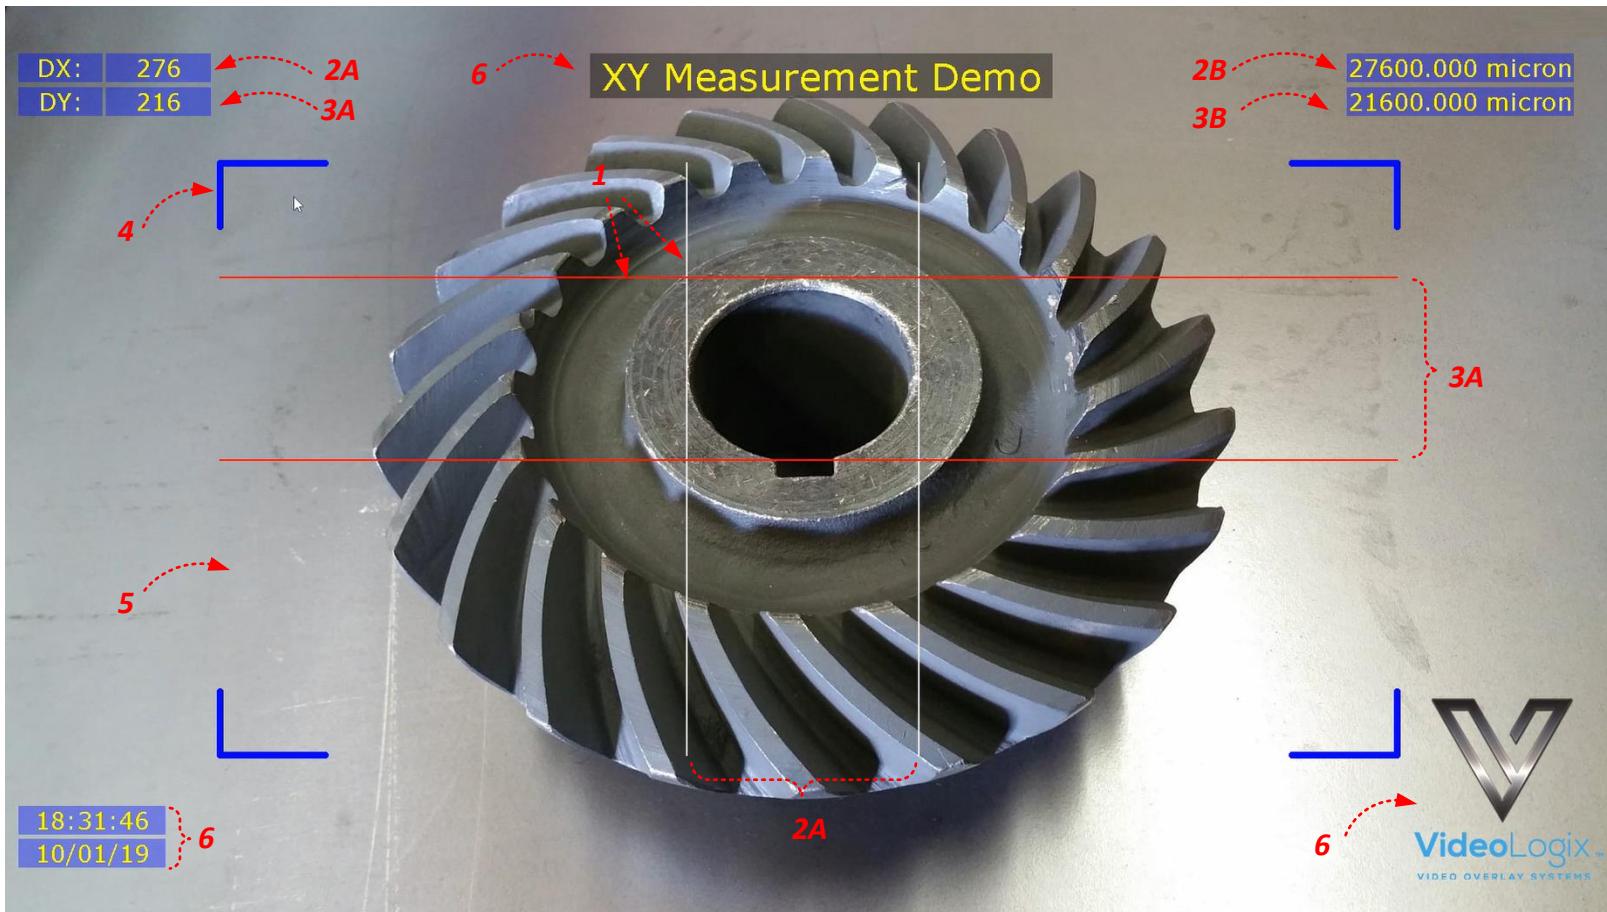

Follow [Figure 35 - Figure 37](#) to set CH1 "Slope" & "Intercept" to 0.163 and 0.0272 respectively.

Follow [Figure 38 - Figure 39](#) to display "Analog Input #1 Map"

To quickly get familiar with this app, please watch our short tutorial video "[Tutorial Analog Inputs](#)" on our web site.

## XY MEASUREMENT

A *sample* XY measurement file is provided with your PROTEUS. To load it, press F9, go to "[Config: Load](#)" and select file "["XY Measurement"](#)"

- |           |                  |                                                                                                            |

Apply 0-3.3V to CH1-CH4

[Quadrature Inputs](#)

Connect incremental encoder switches to quadrature inputs# 1,2.

(Toggle IN0 to select between horizontal & vertical marker pair)

RS232 Command

Send command **\$VL43,157,x1,x2,y1,y2\*XX** to set registers #157,158,159,160

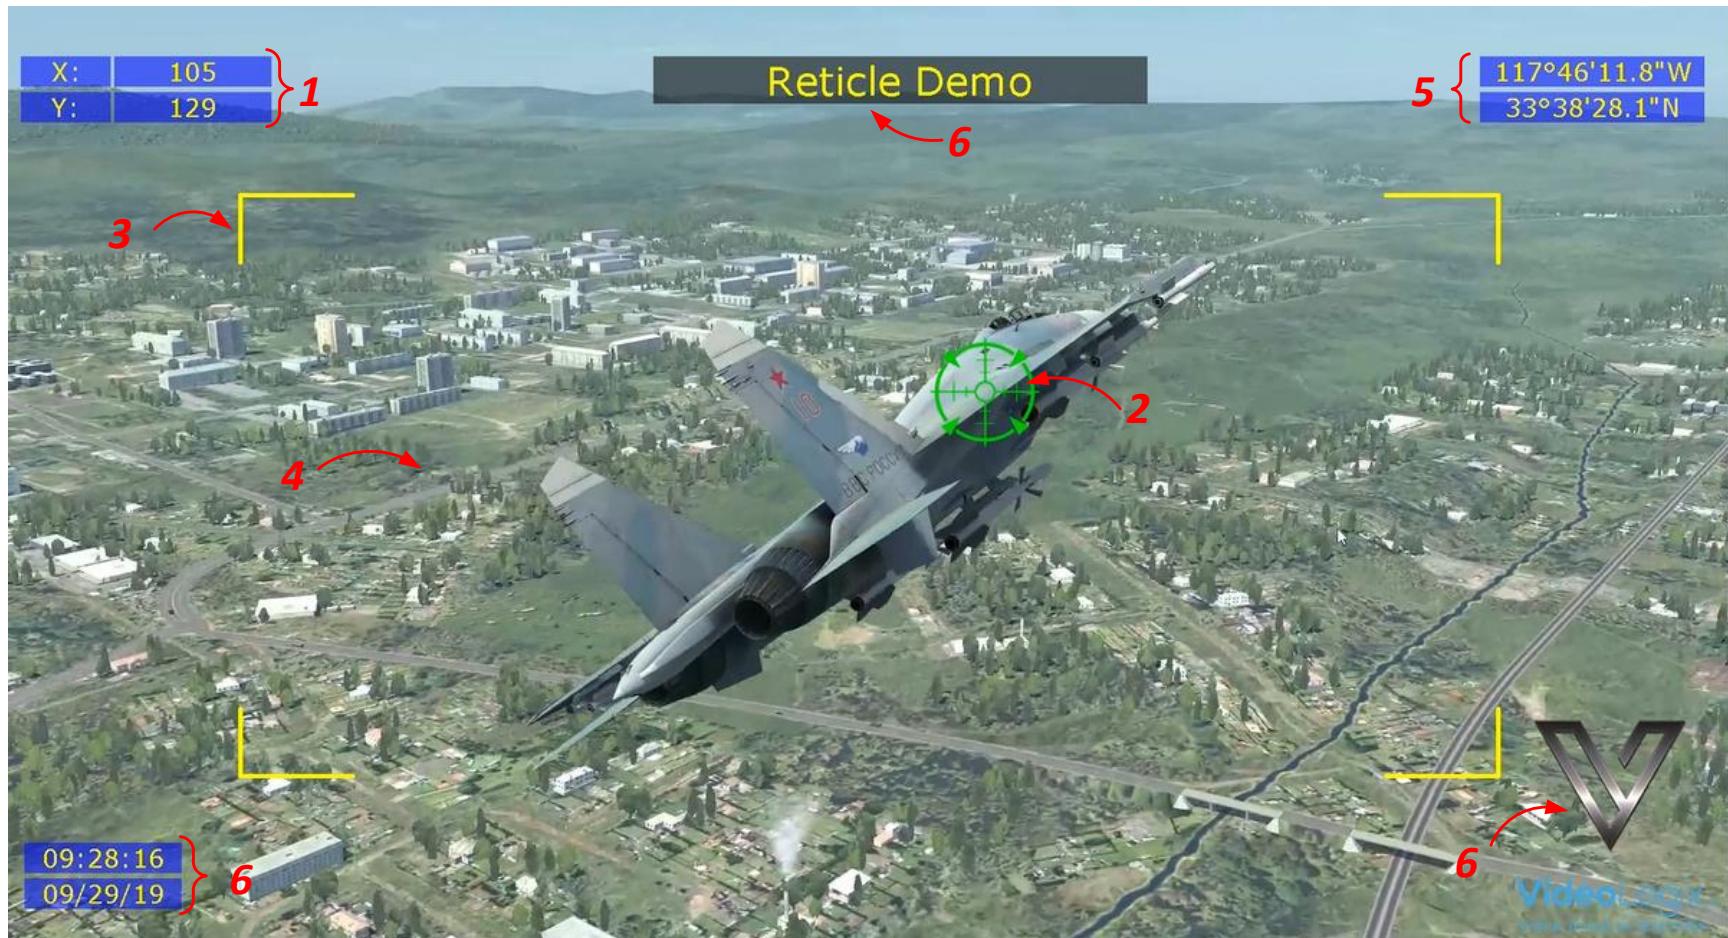

Keyboard Arrow

Use ↪ to move 1-pixel resolution. Use **Ctrl + ↪** to move 25 pixels. Press ↓ to select next marker.

To quickly get familiar with this app, please watch our short tutorial video "[Tutorial Video XY Measurement](#)" on our web site.

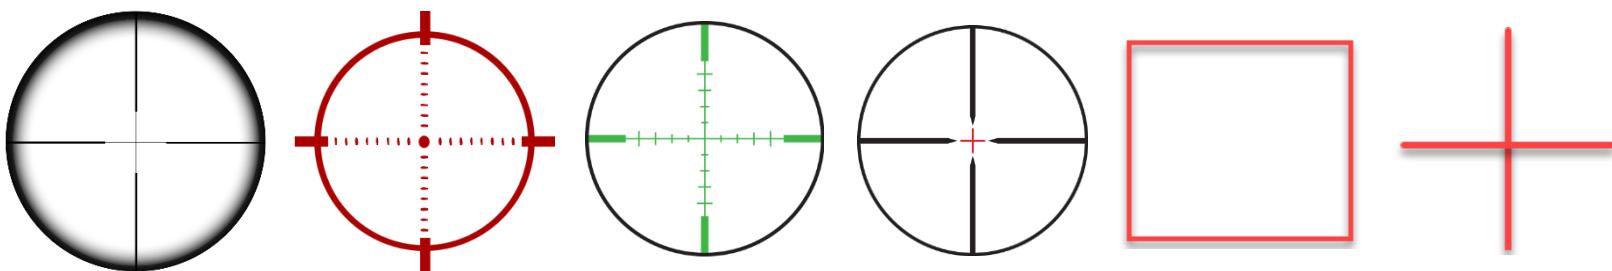

## RETICLE

A *sample* Reticle file is provided with your PROTEUS. To load it, press F9, go to "*Config: Load*" and select "*Reticle*".

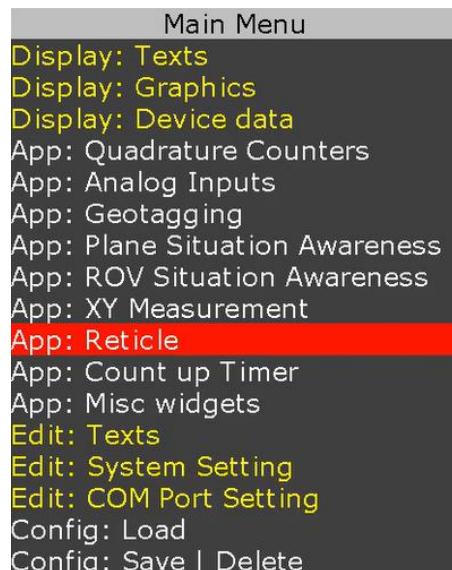

- 1** Reticle position
- 2** Reticle style
- 3** Border
- 4** Area
- 5** GPS
- 6** Misc. parameters

- Reticle X&Y position. Center is at 0,0  
Reticle can be any PNG image, adjustable crosshair or square box. See examples below.
- Reticle can be moved by via Analog inputs, quadrature inputs, RS232 command, arrow keys
- Border can be a bracket, box or none. Adjustable line width & color
- The width and height are adjustable up to 1920 x 1080
- Latitude & Longitude
- Title, Time & Date, Logo. Fully configurable by the user

To customize the sample file to meet your needs, follow [Figure 43 - Figure 45](#)

**Figure 43**

**Figure 44**

**Figure 45**

There are 4 options for Reticle movement:

[Analog Inputs](#)

Apply 0..3.3V to CH1-CH2

[Quadrature Inputs](#)

Connect two incremental encoder switches to quadrature inputs# 1,2

RS232 Command

Send command **\$VL43,155,x,y\*XX** to set registers **#155,156**

Keyboard Arrow

Use **↔** to move 1-pixel resolution. Use **Ctrl + ↔** to move 25 pixels

To quickly get familiar with this app, please watch our short tutorial video "[Tutorial Reticle](#)" on our web site.

## PLANE SITUATION AWARENESS

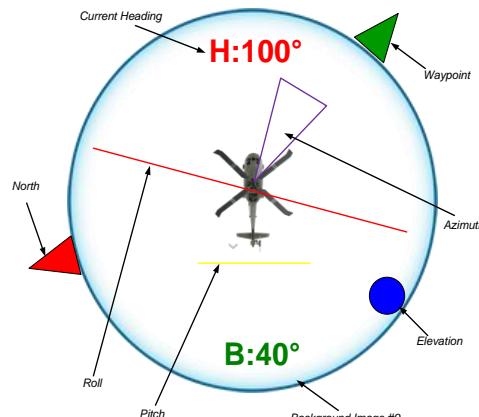

A *sample* Plane file is provided with your PROTEUS. To load it, press F9, go to “*Config: Load*” and select “*Plane*”.

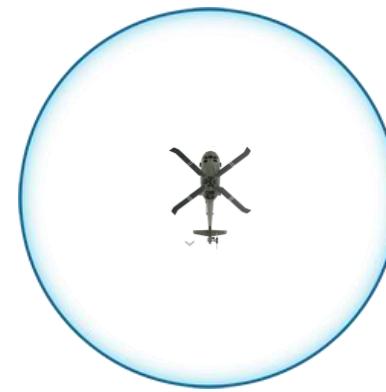

- |            |                        |                                                                       |
|------------|------------------------|-----------------------------------------------------------------------|
| 1          | GPS data               | Read from GPS attach to COM1 or COM2                                  |
| 2          | Plane Situation Widget | Please see below for detail description                               |
| 3          | Compass                | Rolling compass widget                                                |
| 4A, 4B, 4C | Sliders                | 4A depict pitch, 4B roll and 4C Altitude                              |
| 5          | Timer                  | A count up timer with msec resolution                                 |
| 6          | CSV Sentence-A values  | VAL1 = Heading, VAL2 = Bearing, VAL3 = Roll, VAL4=Pitch, VAL5 = Depth |
| 7          | Misc. parameters       | Title, Logo. Fully configurable by the user                           |

## PLANE SITUATION AWARENESS WIDGET

As shown in [Figure 46](#), Plane situation awareness widget depicts parameters such as heading, bearing (relative or magnetic), roll, pitch, azimuth, elevation. The size of the widget is governed by the background image shown in [Figure 47](#). Larger image will result in a larger widget. Background image resides on the microSD and can be replaced by a user-provided image for different size and look & feel. The image must be named “Ring Plane”.

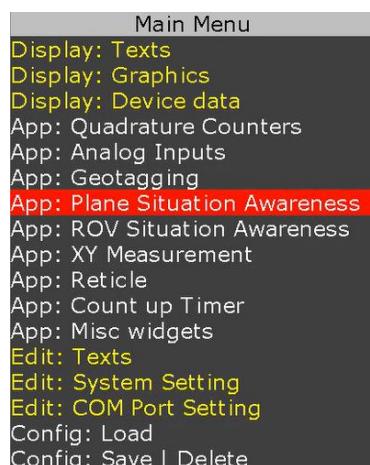

**Figure 46**

**Figure 47**

Follow [Figure 48 - Figure 49](#) to configure the widget.

**Figure 48**

Aircraft Situation Awareness	
When to display	Always On
REG: Heading°	40
REG: Bearing°	41
REG: Roll°	42
REG: Pitch°	43
REG: Gimbal Azimuth°	44
REG: Gimbal Elevation°	45
REG: Lens	46
Invert: Heading°	Off
Invert: Bearing°	Off
Invert: Roll°	Off
Invert: Pitch°	Off
Invert: Azimuth°	Off
Invert: Elevation°	Off
Relative Bearing°	Off
Text color	Index 32
Enter or Type = Edit Ctrl or Alt + Arrow = Move Esc = Abort F10 = Save	

**Figure 49**

Follow [Figure 49](#) to specify what register are associated with each parameter. For example, table below shows available options for heading:

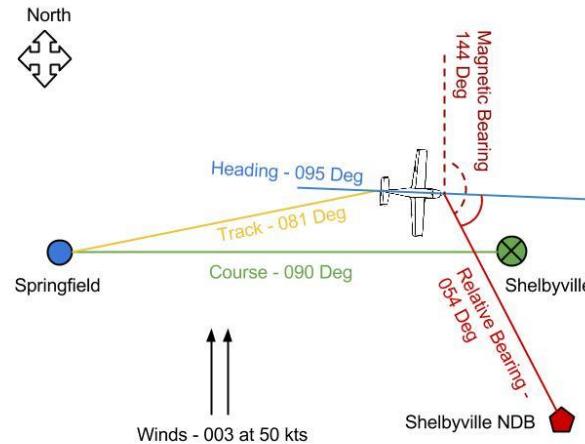

Register # associated with Heading	Description
102	Heading is provided by attaching Garmin GPS modem to a COM port
114	Heading is provided by attaching Vector NAV INS sensor to a COM port
40	Heading is provided by transmitting a CSV sentence A to a COM port. Heading would be VAL1
00	<b>Do not display heading</b>

The device (GPS, INS ...) specific registers are updated automatically when it is connected to PROTEUS. When the content of a register changes, any widget (text or graphic) that is linked to that register is **automatically** updated.

The content of any register can also be changed by sending Set Register Command. Assuming register 40 is linked to heading, command below will set the heading to 85°. Therefore, all widgets linked to register 40 will be updated automatically.

```
$VL43,40,85*XX
```

[Figure 50](#) demonstrates the relation between heading, relative vs magnetic bearing:

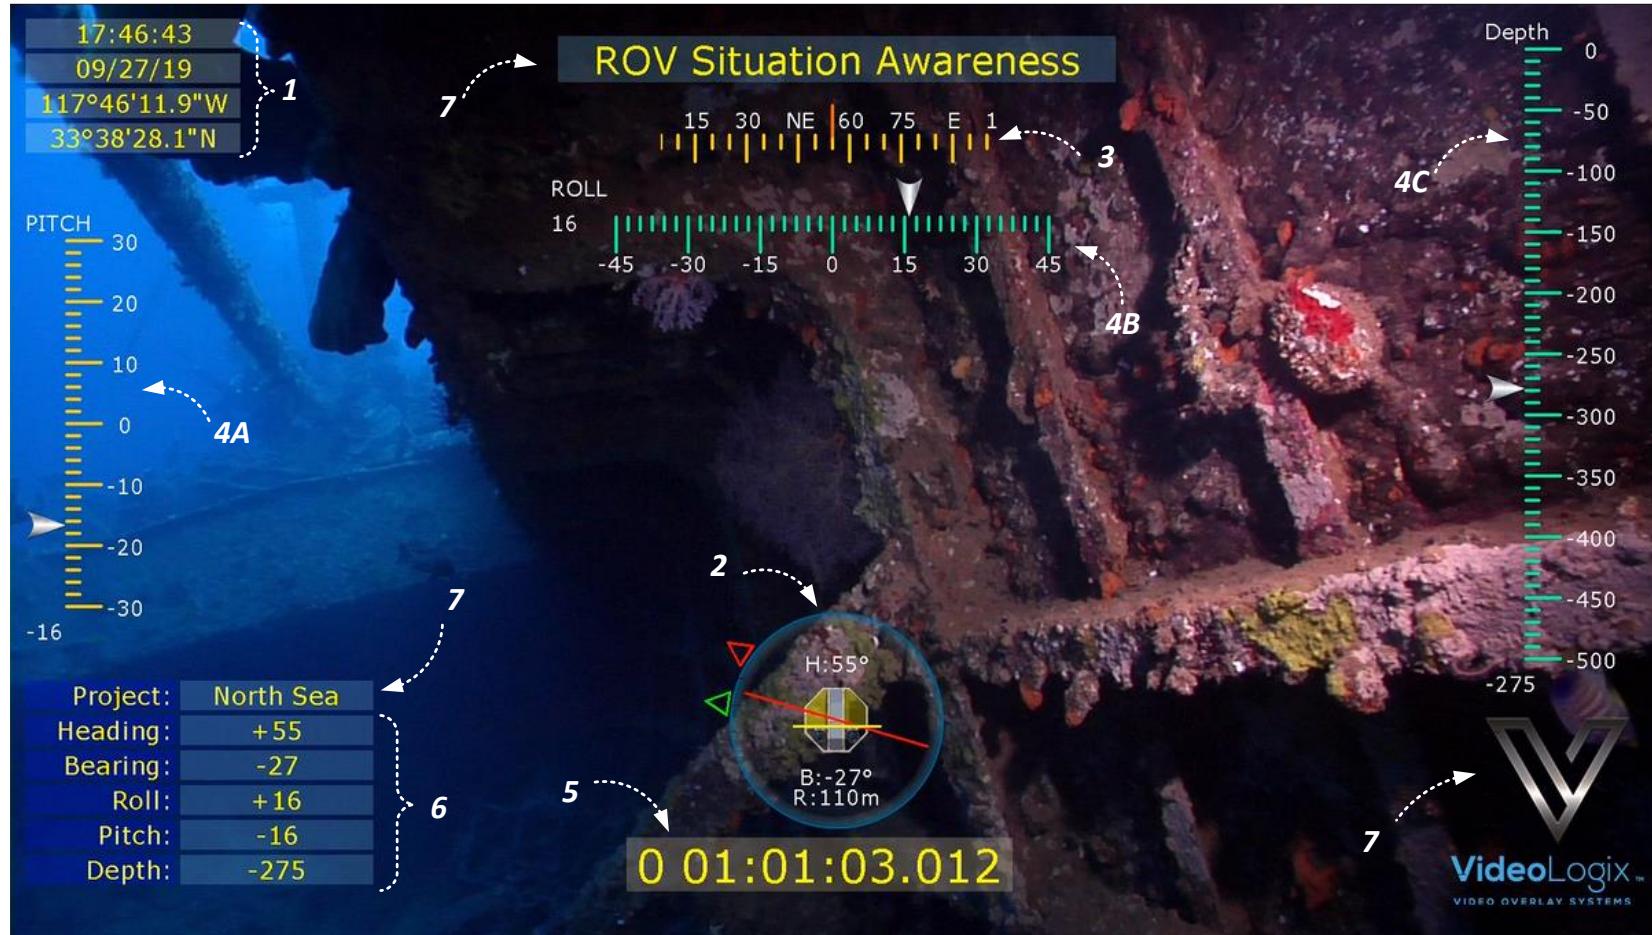

**Figure 50**

To customize the sample file to meet your needs, please visit the corresponding section in this document to learn about the specifics.

## Rov Situation Awareness

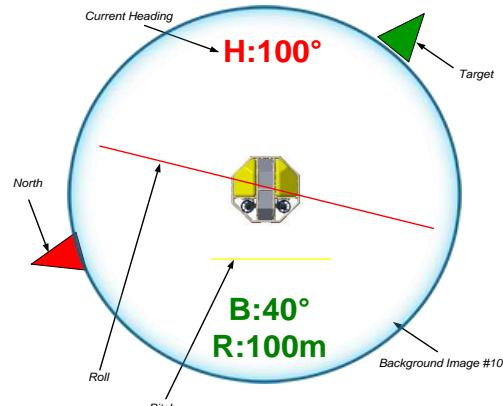

A *sample* ROV file is provided with your PROTEUS. To load it, press F9, go to "*Config: Load*" and select "ROV".

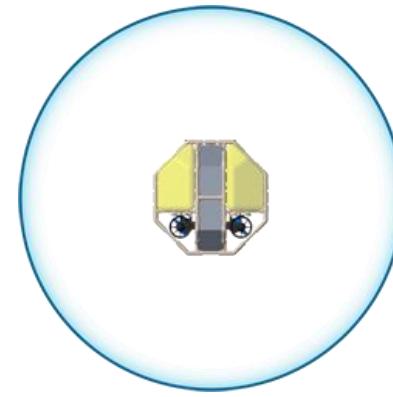

- 1 GPS date  
Read from GPS attach to COM1
- 2 ROV Situation Widget  
Please see below for detail description
- 3 Compass  
Rolling compass widget
- 4A, 4B, 4C Sliders  
4A depict pitch, 4B roll and 4C Depth
- 5 Timer  
A count up timer with msec resolution  
VAL1 = Heading, VAL2 = Bearing, VAL3 = Roll, VAL4=Pitch, VAL5 = Depth
- 6 CSV Sentence-A values  
Title, Logo. Fully configurable by the user
- 7 Misc. parameters

## ROV SITUATION AWARENESS WIDGET

As shown in [Figure 51](#), ROV situation awareness widget depicts parameters such as heading, bearing (relative or magnetic), range to target, roll and pitch. The size of the ROV widget is governed by the background image shown in [Figure 52](#). Larger image will result in a larger widget. Background image resides on the microSD and can be replaced by a user-provided image for different size and look & feel. The image must be named “Ring Rov”.

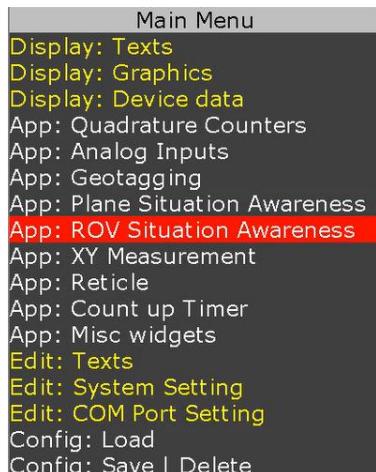

**Figure 51**

**Figure 52**

Follow [Figure 53](#)-[Figure 54](#) to configure the widget.

**Figure 53**

Rov Situation Awareness	
When to display	Always On
REG: Heading°	40
REG: Bearing°	41
REG: Roll°	42
REG: Pitch°	43
REG: Range	44
Invert: Heading°	Off
Invert: Bearing°	Off
Invert: Roll°	Off
Invert: Pitch°	Off
Relative Bearing°	Off
Text color	Index 32
<i>Enter or Type= Edit Ctrl or Alt + Arrow =Move Esc=Abort F10=Save</i>	

**Figure 54**

Follow [Figure 54](#) to specify what register is associated with each parameter. For example, table below shows available options for heading:

Register # associated with Heading	Description
80	Heading is provided by attaching Garmin GPS modem to PROTEUS COM port
110	Heading is provided by attaching Vector NAV INS sensor to PROTEUS COM port
40	Heading is provided by transmitting a CSV sentence A to a COM port. Heading would be 1 <sup>st</sup> variable.
00	<b>Do not display heading</b>

The device (GPS, INS ...) specific registers are updated automatically when it is connected to PROTEUS. When the content of a register changes, any widget (text or graphic) that is linked to that register is **automatically** updated.

The content of any register can also be changed by sending Set Register Command. Assuming register 40 is linked to heading, command below will set the heading to 85°. Therefore, all widgets linked to register 40 will be updated automatically.

```
$VL43,40,85*XX
```

To customize the sample file to meet your needs, please visit the corresponding section in this document to learn about the specifics.

## SLIDERS

PROTEUS provides 4 fully configurable sliders. Follow [Figure 55- Figure 57](#) to configure the sliders.

Figure 55

Figure 56

Slider	
When to display	Always On
Orientation	HORZ
Major tick marks	5
Minor tick marks	5
Tick gaps	14
Tick color	Index 35
Text color	Index 32
Line width	2
Link to register	52
Min value	0
Max value	100
Title	Power
Arrow Type	Solid
Compass	Off
Enter or Type= Edit Ctrl or Alt + Arrow =Move Esc=Abort F10=Save	

Figure 57

Slider must be linked to a register. Registers are updated via associated sensors or through RS232 commands. When the linked register receives a new value, associated slider is automatically updated.

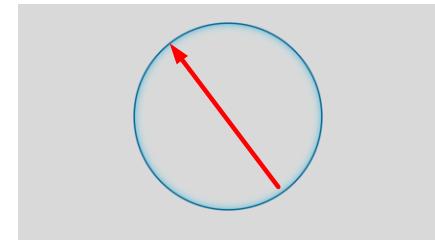

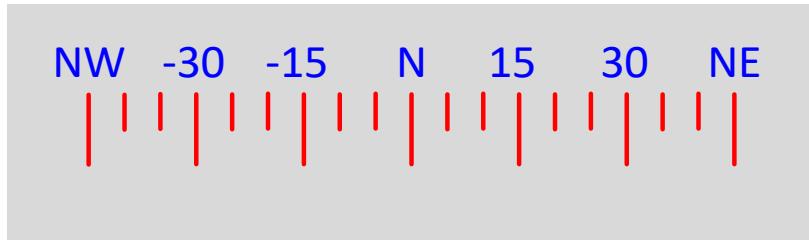

Assuming slider is linked to register #40, RS232 command **\$VL43,40,30\*XX** will set slider to 30.

**Figure 58**

## COMPASS

PROTEUS provides a rolling compass and simple circular compass as shown below.

Follow [Figure 59 - Figure 61](#) to configure each compass

Figure 59

Figure 60

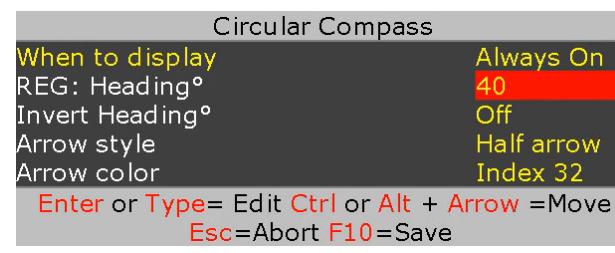

Figure 61

Rolling compass provides 4 visible spans ( $30^\circ$ ,  $45^\circ$ ,  $60^\circ$ ,  $90^\circ$ ) with 4 different legends described below:

- $0..360^\circ$
- $0..360^\circ$  NSEW
- $-180^\circ...+180^\circ$
- $-180^\circ...+180^\circ$  NSEW

The size of the circular compass widget is governed by its background image. Larger image will result in a larger compass. Background image resides on the microSD and can be replaced by a user-provided image for different size and look & feel. The image must be named "Ring100".

## GEOTAGGING & KML GENERATION

**Geotagging** is the process of syncing geographical data such as latitude and longitude coordinates, time and date, video time code (VTC), altitude, bearing, camera gyro (pitch, roll, azimuth) etc. to your video in real time. This produces geotagged media (KML file) that can be viewed in Google Earth so you can see the exact location where video was taken.

During geo recording, operator can drop unique place markers (red marker #1, #2) to bring attention to monitoring staff.

During playback, monitoring staff can click on any place marker and jump to the exact instant in the video.

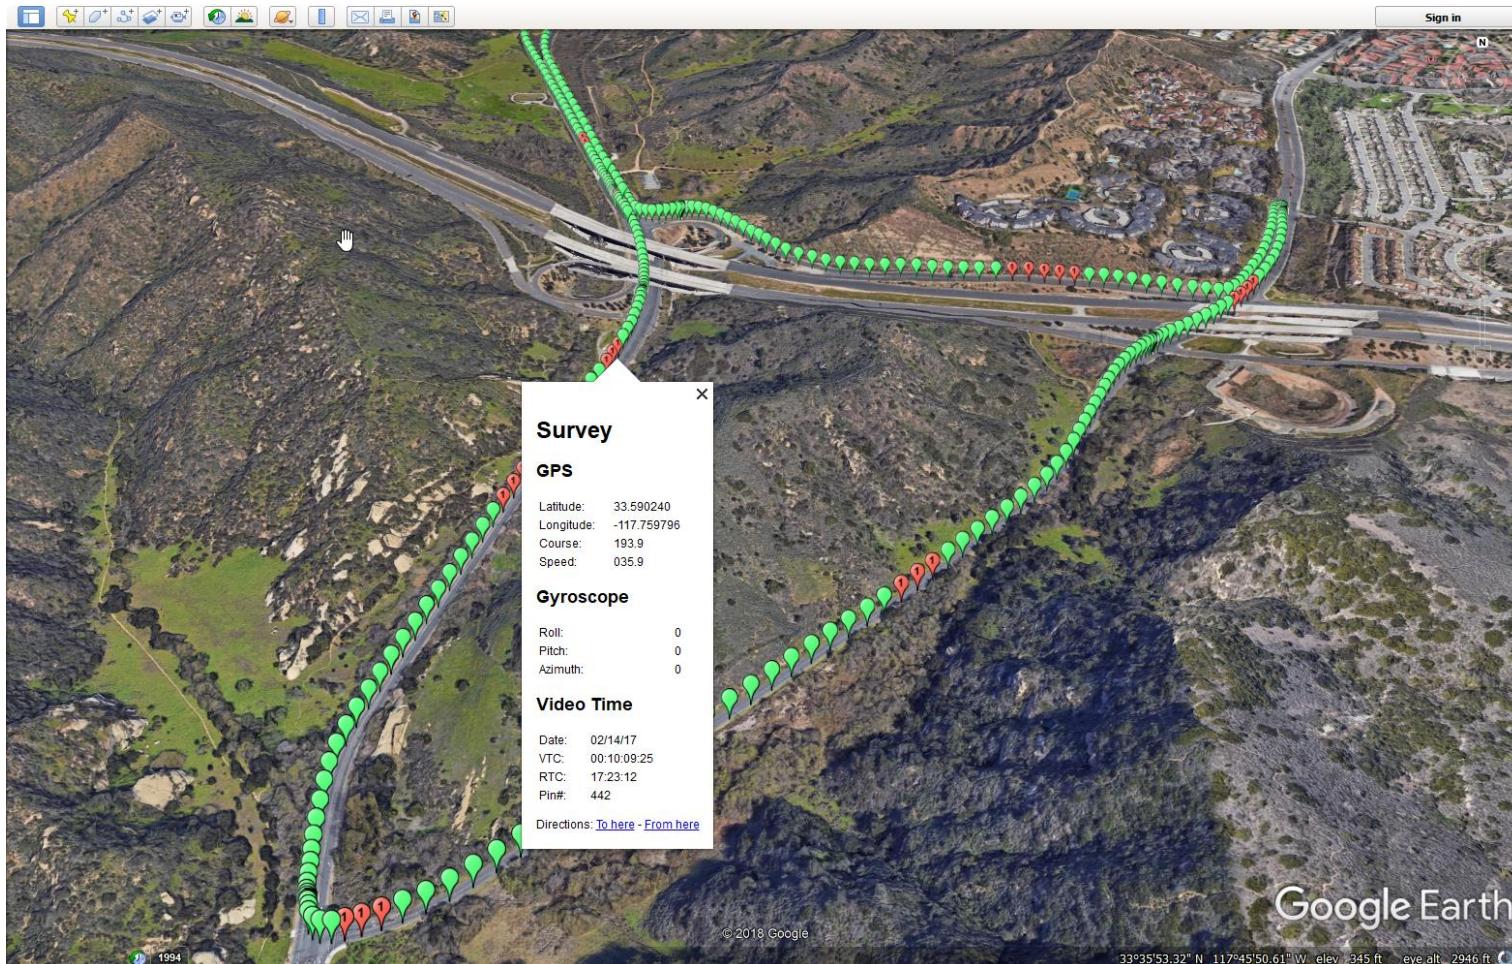

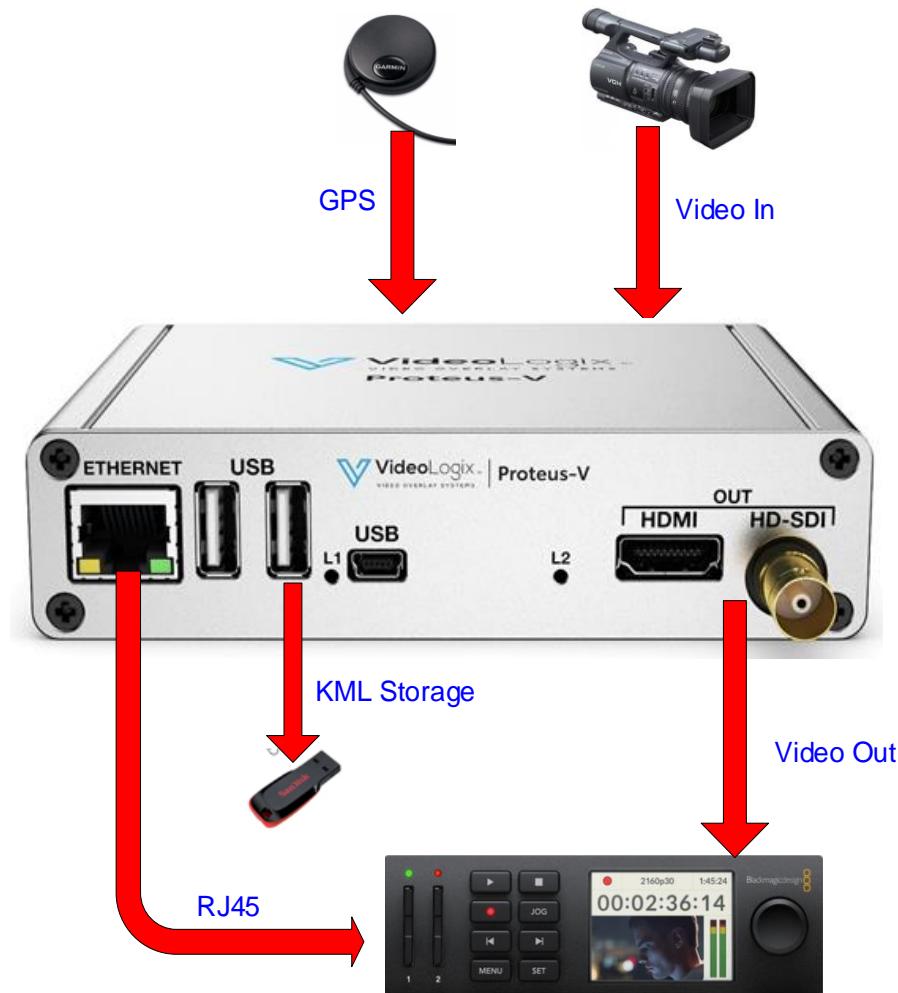

Figure 62

## RECORDING SETUP

## PLAYBACK SETUP

## CONFIGURATION

Press F9 and follow figures below to configure the geotagging.

Settings	Description
REG: Gyro Pitch	Enter PROTEUS register# where values are read from.
REG: Gyro Roll	
REG: Gyro Azimuth	For example, for Pitch: <ul style="list-style-type: none"> <li>• If a Vector NAV IMU is attached to PROTEUS, enter <a href="#">115</a></li> <li>• If user provides pitch value via CSV Sentence-A (VAL2) enter <a href="#">41</a></li> <li>• If not required, enter 0</li> </ul>
REG: Latitude	
REG: Longitude	
KML File Name	<i>This field will be used in the future release</i>
Video File Name	<i>This field will be used in the future release</i>
F1/F2 Control Video Recording	<i>Video recording can be control directly or via keyboard. F1 = Start, F2 = Stop</i>
Log KML when moving only	<i>To reduce file size, recording can be enabled only when in motion</i>
Include Video Time Code	If enable, video recorded must be connected to PROTEUS via Ethernet cable
Video Recorder IP address	Enter IP address of the video recorder

You can easily customize what information is overlaid on your video in real time. In the sample screen shown in [Figure 63](#):

- GPS time, date, latitude and longitude are superimposed on the upper left.
- A rolling compass in the center.
- Current Video Time Code (VTC) and current place marker # on the upper right.

As shown in Figure 62, the default place marker is green. When F3 or F4 is pressed, red place marker #1 or #2 is inserted once. Alternative place markers can be used to quickly bring attention to locations requiring in depth analysis.

To start KML recording, press F1.

To stop KML recording, press F2.

As shown in Figure 62, during KML recording, the red icons located on the upper right flashes once per second to confirm recording is in process.

Figure 63

## COUNT UP TIMER

PROTEUS provides Count Up timer. Follow *Figure 64-Figure 65* to configure the timer.

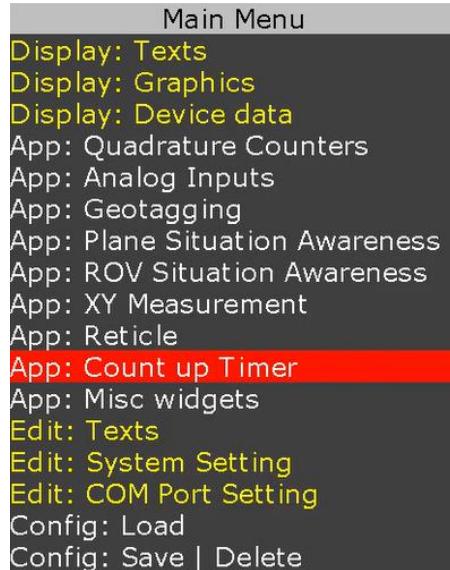

Figure 64

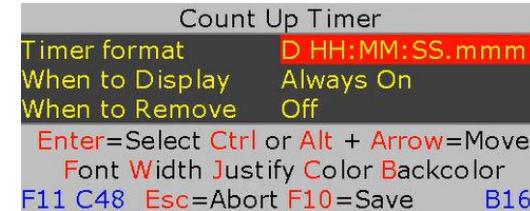

Figure 65

## CLOCK SOURCE

Source	Description
Internal 27MHz	Source for 1msec pre-scaler

## EXTERNAL CONTROLS

GPI	Description
IN1	0 = Pause Timer, 1 = Resume Timer
IN2	0 = Reset Timer. Reset occurs within 10nsec.

## TIMER FORMAT

Timer format is “D HH:MM:SS.mmm” where D is number of days and mmm is milliseconds

# PROTEUS COMMANDS

Aside from supporting various connected devices, PROTEUS provides over 30 powerful commands to overlay crisp and clear texts, graphics and telemetry generated information into an incoming HD & SD video in real time. Refer to the Software Communication Spec (SCS) for the detail description of each command.

## TRANSMIT A COMMAND SCRIPT

1. Connect PROTEUS to your monitor. Connect RS232 cable from your PC to the PROTEUS. Power on PROTEUS.
2. Run *PROTEUSApp* located in folder <C:\VideoLogix-V\utility>.
3. Use *File, Select Com Port* to assign a com port.
4. Go to "Demo/Tutorial" tab.
5. Click *Run Script Now* button and load <C:\VideoLogix-V\Script\0-TestCommands>.
6. A demo should appear on your video monitor.

## **PROTEUS REGISTERS**

PROTEUS system contains a collection of registers used for configuring the system and accessing the data it produces. These registers may be read or written to using the Read Register and Write Register commands (refer to SCS for detail). The table in Appendix G provides a quick reference for all the registers and their associated properties. The device specific (Cineflex, IMU, GPS ...) registers are automatically updated when the associated device is connected to PROTEUS. Widgets that are linked to a register are updated automatically when the content of the register changes.

# SPECIFICATIONS

## MAXIMUM INPUT VOLTAGE

Min (DCIN)	Max (DCIN)	Power
6VDC	42VDC	4 watts

## INPUT CONNECTOR

DC power jack is standard 2 conductors, center pin positive, 2.1mm ID, 5.5mm OD.

## ENVIRONMENTAL

Specifications	Min	Max
Operating Temperature	0° C	65° C
Humidity	10-90% RH Non-Condensing	
Storage Temperature	-40° C	115° C

## WEIGHT & DIMENSION

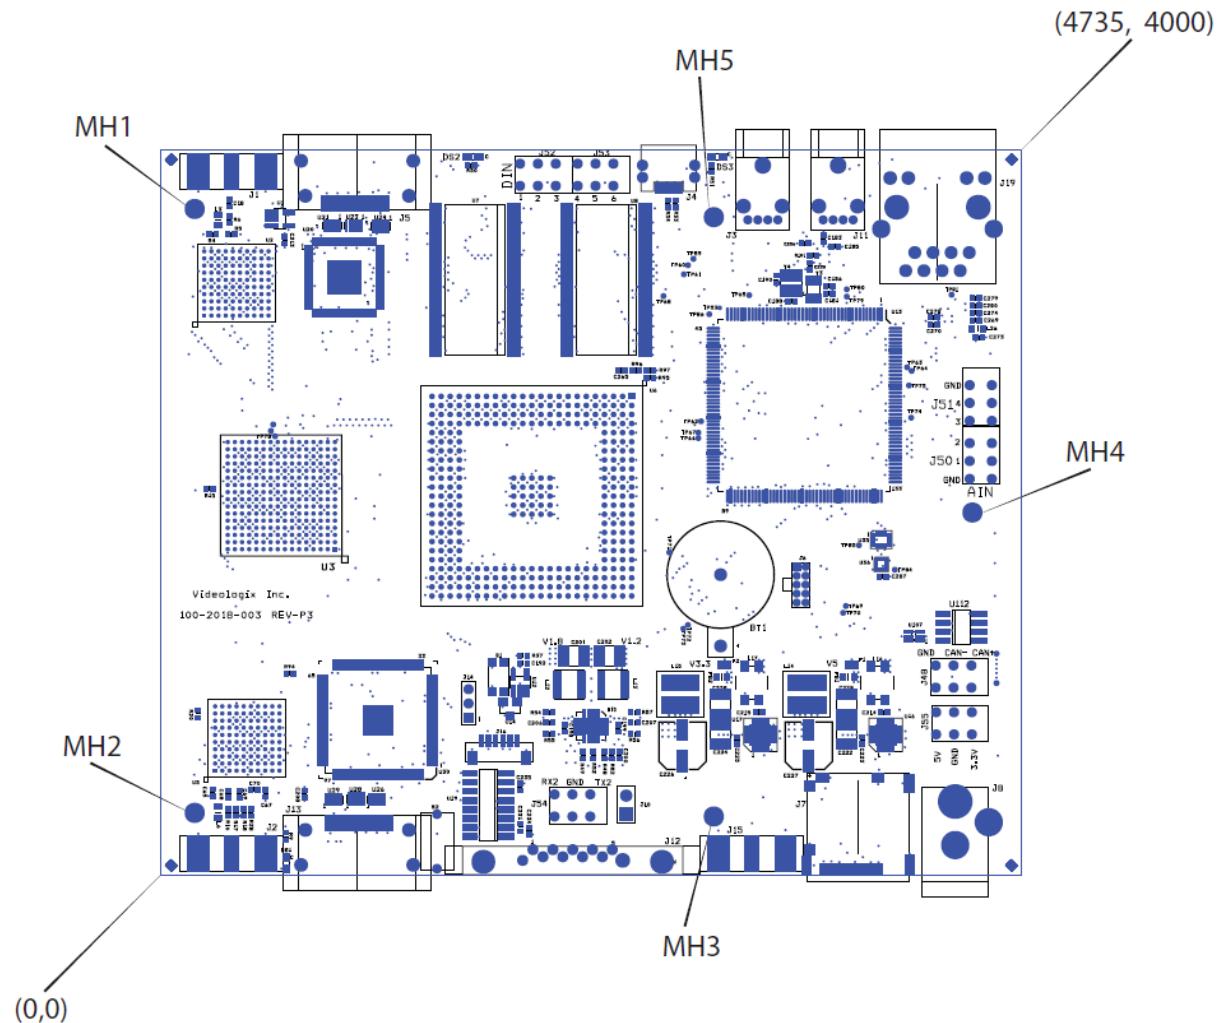

Weight	1 lbs.
Dimension	125.30 x 105.23 x 30.51 (mm)

## FRONT PANEL LED

PROTEUS provides 3 LED's in the front & rear panel.

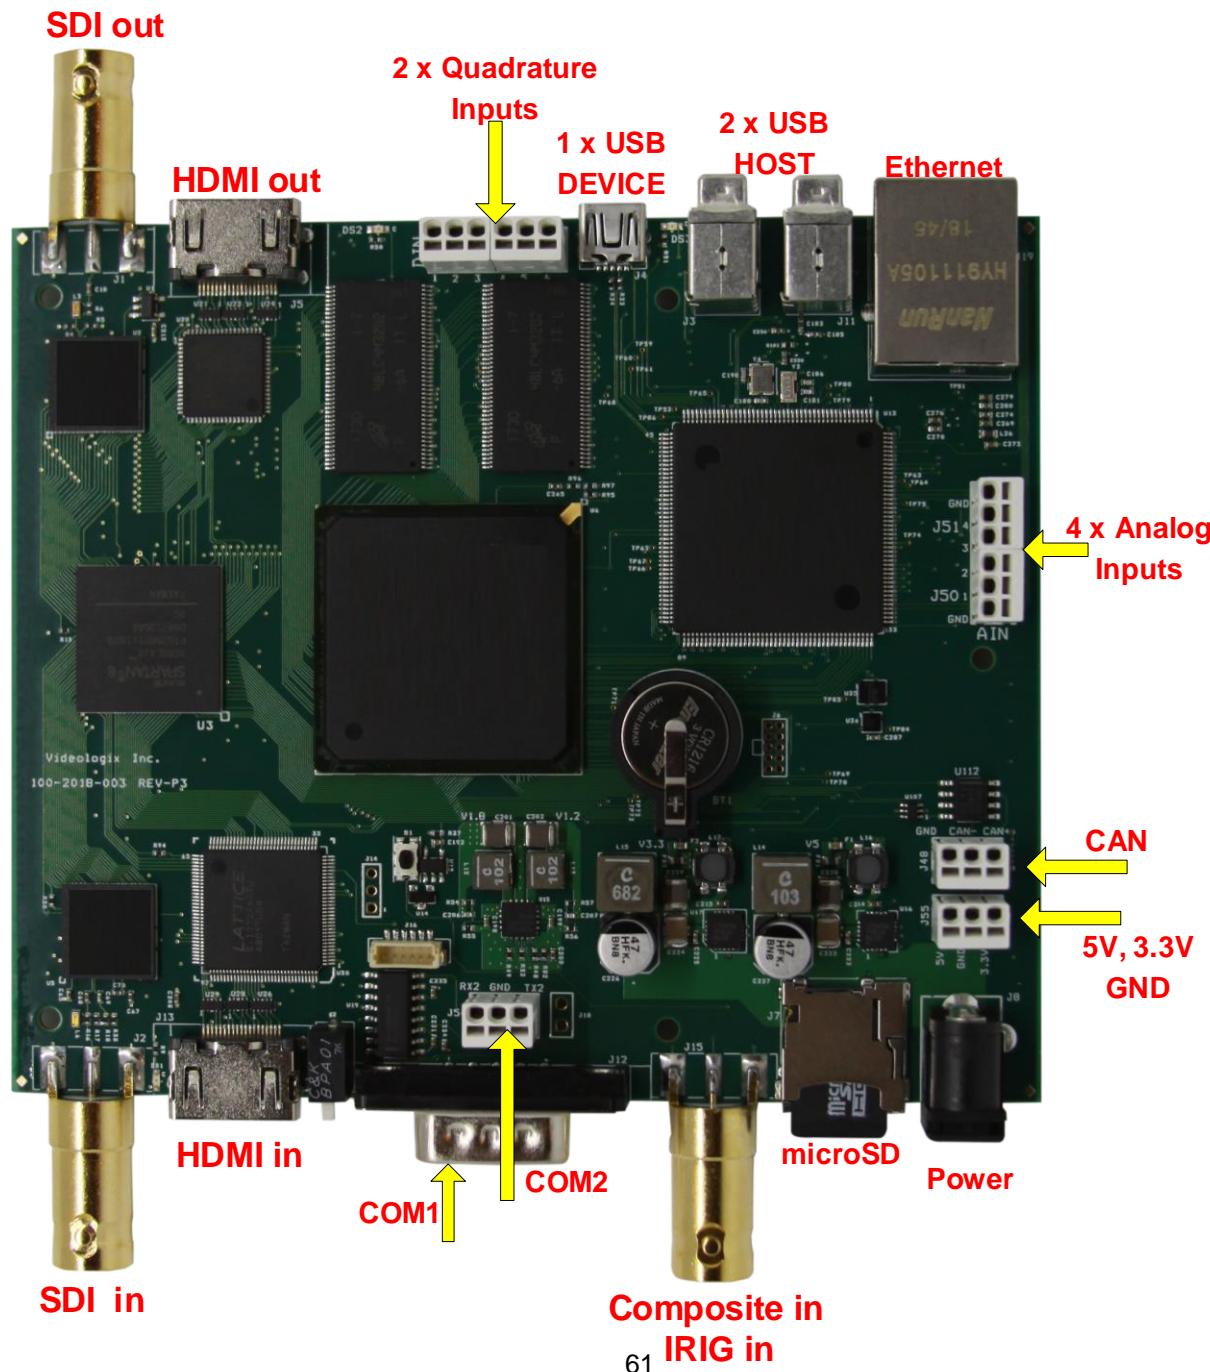

LED	Description
L1	<i>Flashes when a RS232 message is received</i>
L2	<i>Flashes when system is working properly</i>
L3	<i>Flashes when FPGA is working properly</i>
Ethernet LED	<i>Flashes when there is a write to the USB flash drive</i>

## PCB DIMENSION

## ENCLOSURE DIMENSION

## APPENDIX A – KEYBOARD COMMANDS

### KEYBOARD COMMANDS

Keyboard command	Description
F8	Shortcut to “Edit: User Texts”
F9	Launch <b>Main-Menu</b>
F10	<b>Save</b> changes & exit <b>Sub-Menu</b>
ESC	<b>Abort</b> changes and exit <b>Sub-Menu</b>
Enter    or    Ctrl + Enter	Select an item from the picklist i.e. COM1, COM2...
Alt + G	Draw 60 x 60 pixel gridlines on video
Alt + H	Help

### KEYBOARD SHORTCUTS

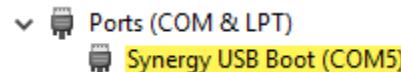

The following keystrokes are used to format the text superimposed on video.

Forward	Reverse	Browse	Description
C      or    Ctrl + C		Color:	Change text foreground color
F      or    Ctrl + F		Font:	Change font type
W      or    Ctrl + W		Width:	Change width of the field
J      or    Ctrl + J		Justify text:	Left, center or right justification text within field
B      or    Ctrl + B		Background color:	Change text background color
Ctrl + Arrow    or    Alt + Arrow			Move text location. Hold <b>Ctrl</b> to move the field 30 pixels and <b>Alt</b> to move the field 2 pixels.

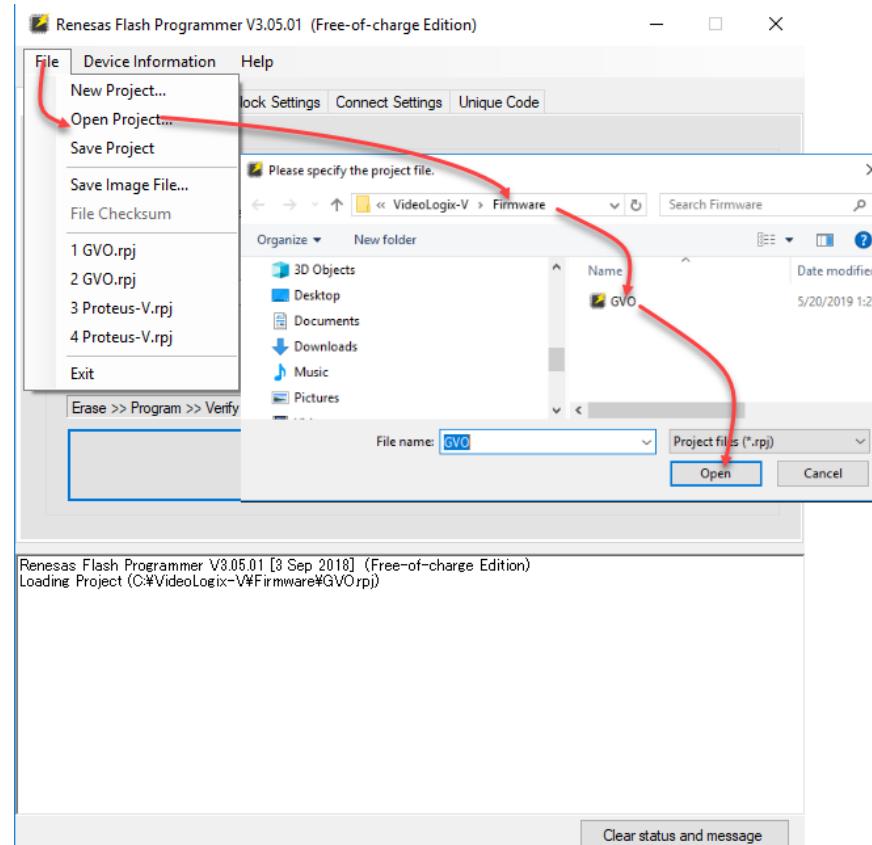

## APPENDIX B – UPDATING FIRMWARE

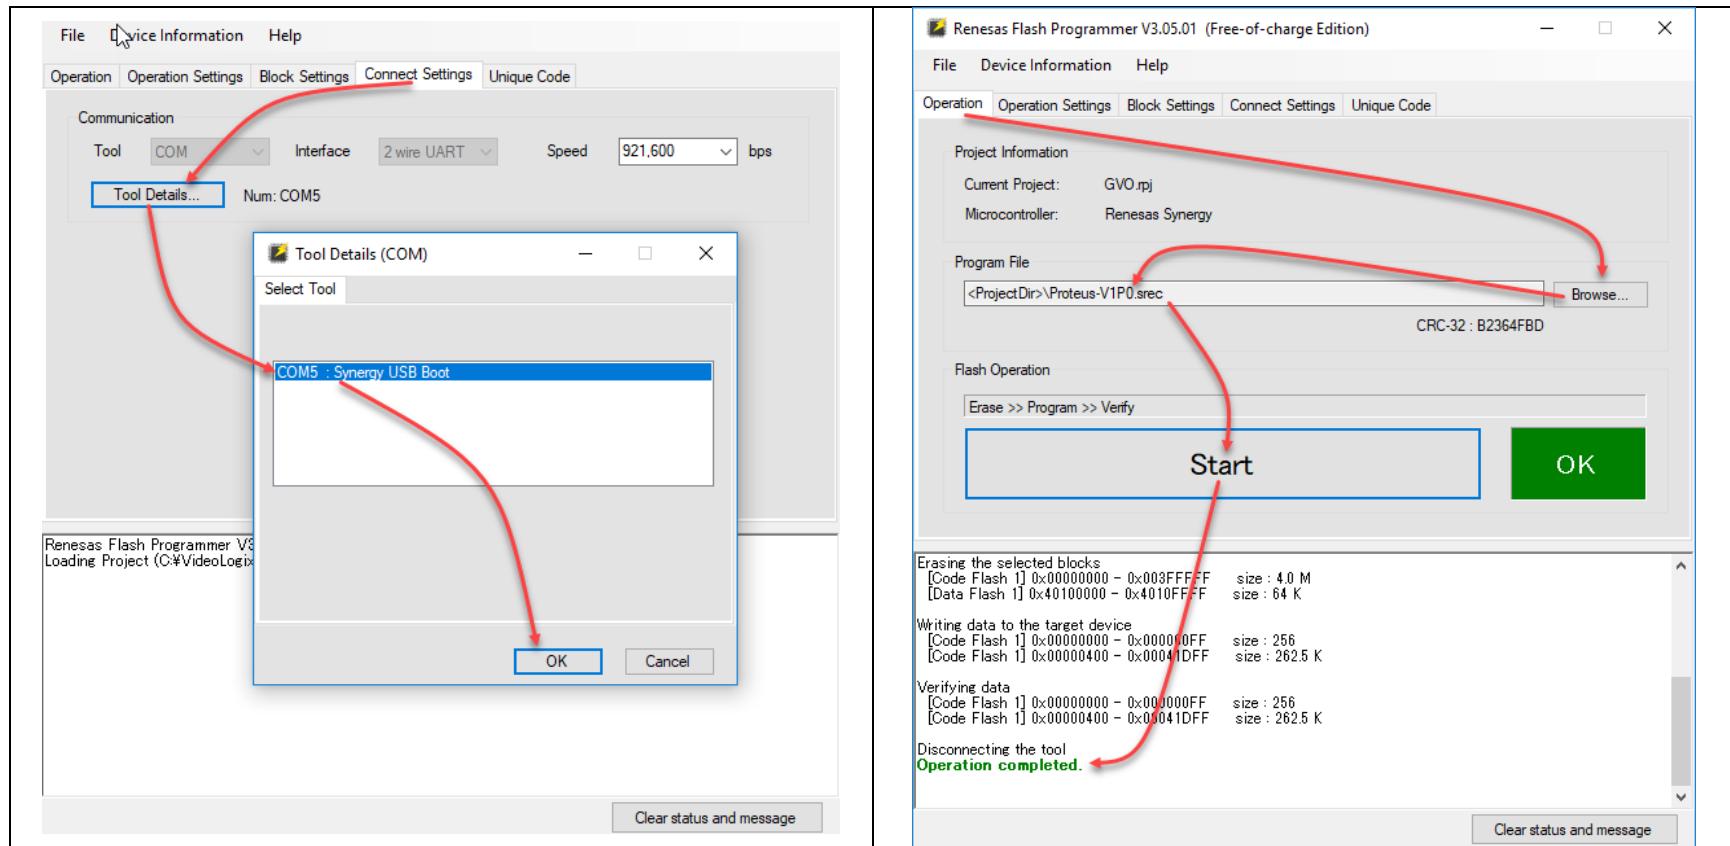

This section *assumes* you have already installed Renesas Flash Programmer. If not, please follow instruction in Appendix C.

1. Toggle CFG switch in the rear panel to the lower position
2. Cycle power to PROTEUS
3. Connect mini USB cable from your PC to PROTEUS
4. Your PC should acknowledge PROTEUS with a beep. Alternatively, Device manage will add the following:

5. Start Renesas Flash Programmer and Follow instructions below:

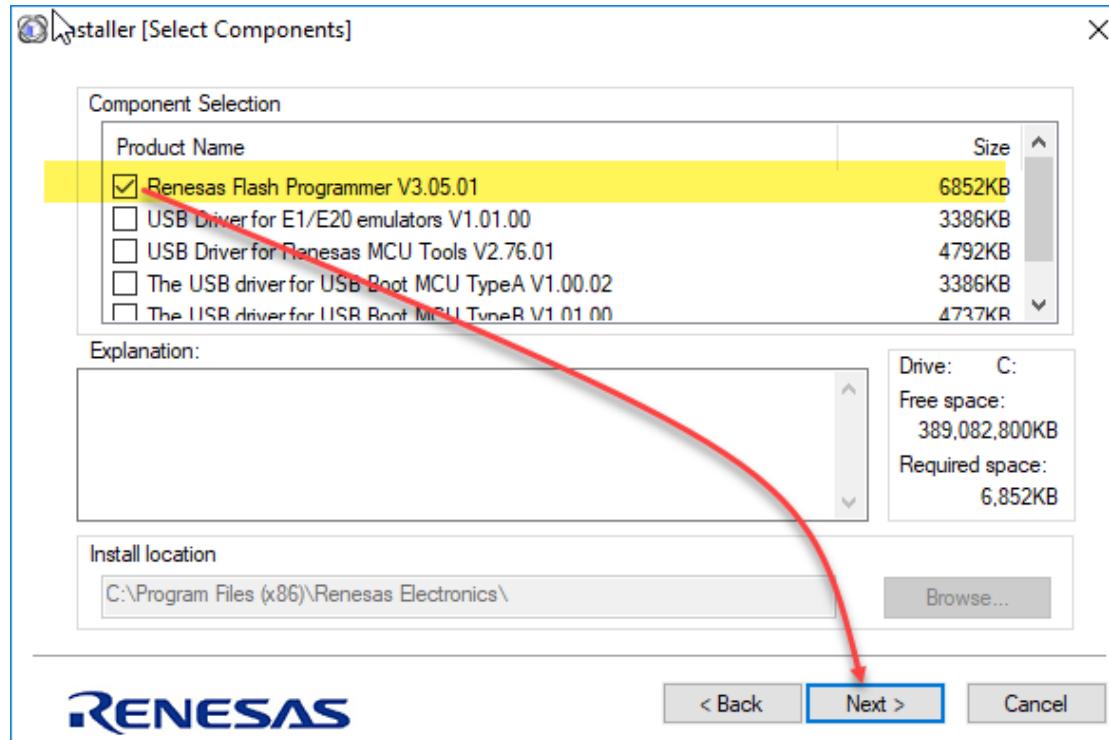

6. After 'Operation completed', Toggle CFG switch in the rear panel to the upper position
7. Cycle power to PROTEUS and you are done.

## APPENDIX C – INSTALL RENESAS FLASH PROGRAMMER

Launch program 'Renesas\_Flash\_Programmer\_Package\_V30501' and follow instruction below. *This program is in utility folder on microSD card.*

## APPENDIX D – IMAGES

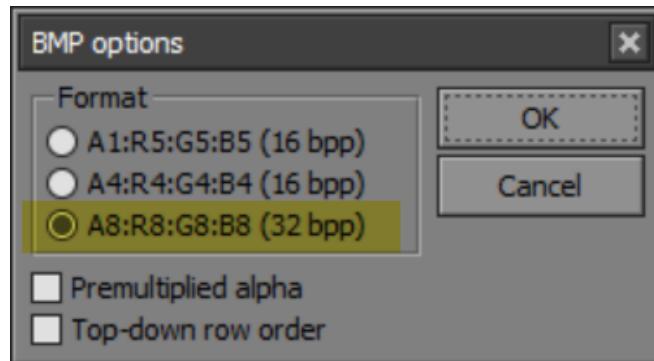

PROTEUS can display PNG and JPG images.

### JPG

Image width & height divisible by 32. For example, 32 x 32 or 64 x 32 or 224 x 192, 320 x 64, etc.

### PNG

PNG image must be converted to 32-bit BMP using Pixelformer utility. This utility will preserve pixel level alpha blending. *This program is in utility folder on microSD card*. Use File-import to open PNG file and File-export to create the BMP file. When prompted, select A8:R8:G8:B8 as shown below.

### LOCATION

Store images in the folder [Images](#) on the microSD card.

## APPENDIX E – CREATE CUSTOM FONTS

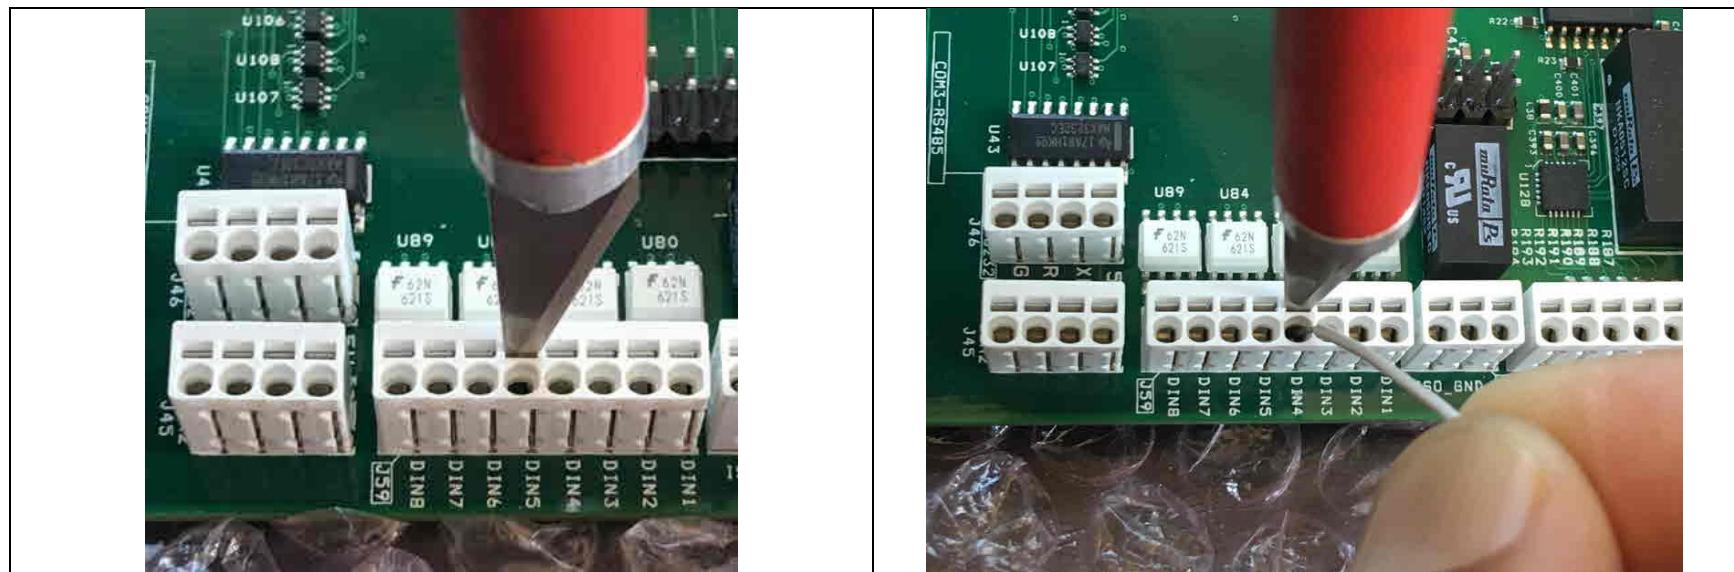

FONT0 through FONT7 can be customized by the user. To create your own fonts, follow steps below:

1. Start PROTEUSApp. *This app is in utility folder on microSD card.*
2. Go to **Font + Bitmask** tab.
3. Click **Select Font** button and select your desire font type & style.
4. Click **Create Font File** button.
5. Select your desire ISO Character set template from **C:\videologix-V\Fonts\ISO8859-9 Latin1.txt**
6. Type a file name for your font and press save.
7. Your new font will be stored in folder **C:\videologix-V\Fonts\**
8. Edit file **FontList.txt** to add your new font file.
9. Copy **FontList.txt** and new font file to the folder ‘**Fonts**’ on microSD card.

## APPENDIX F – TERMINAL BLOCKS

Care must be taken when inserting wire into terminal blocks. Do not insert thick screwdriver into terminal block as it will permanently damage the internal spring-loaded contacts. In general, any blade with 0.4mm x 2mm cross section is appropriate. Digikey P#1205202 is factory approved.

We have learned that X-ACTO Knife shown below works best.

## APPENDIX G – REGISTER DESIGNATION

Register ID	Designation
0	-
1	PM_STRING,
2	PM_BITMASK,
3	PM_VIDEO_MOD,
4	PM_UTC_OFFSET,
5	PM_RTC_TIME,
6	PM_RTC_DATE,
7	PM_IRIG_TIME,
8	PM_IRIG_DATE,

## APPENDIX H – FORMAT MICROSD

Disable power before removing or inserting microSD card.

- The following instructions only apply to firmware version V2.24 or higher.
- microSD card capacity is limited to 2GB, 4GB, 8GB, 16GB, 32GB.
- Follow the diagram below to **format** your microSD card. Select **FAT32** as File System and Allocation unit size of **8192 bytes**.
- After microSD format, copy the folders shown below into your microSD card.
- Always **eject** the microSD card (as shown below) to complete the write operation.
